# Section 1: Executive Summary

## Process and Methods

This community health needs assessment brings together a variety of demographic information and health data, gathered from both primary and secondary sources.

The first phase of the community health needs assessment involved collection and analysis of numerous demographic data and health status information for USC Arcadia Hospital (USCAH) Service Area, Service Planning Area (SPA) 3 – San Gabriel Valley, and Los Angeles County. The following types of data were analyzed: population, household and family demographics, birth statistics, death statistics, recent counts of homelessness, education statistics, designated Health Professional Shortage Areas, large-scale household telephone surveys designed to measure health access, utilization of health services, and health behaviors. This 2025 Community Health Needs Assessment includes a description of the Social Determinants of Health – economic stability, education access and quality, health care access and quality, neighborhood and built environment, and social and community context – using the framework developed in Healthy People 2030. Wherever possible, the SPA 3 or Los Angeles County health experience was benchmarked to Health People 2030 objectives. To provide further context to the regional demographics, USCAH Service Area is compared to Los Angeles County.

The second phase of the needs assessment focused on qualitative primary research. Representatives from USC Arcadia Hospital agreed that telephone interviews with public health department contacts and representatives from public and private community organizations would be a cost-effective means to gain an understanding of important health issues and potential opportunities to collaborate with these organizations to improve the health status of residents of the San Gabriel Valley. In addition to telephone calls made by USCAH, other member hospitals of the Health Consortium of Greater San Gabriel Valley shared their interview transcripts with USCAH; these findings were reviewed and incorporated in the summary of USCAH community consultations.

## Service Area Determination

Note: Determination of service area updated based on 2024 inpatient origin analysis

USC Arcadia Hospital uses the Stark II definition – the lowest number of contiguous ZIP Codes from which the hospital draws at least 75 percent of its inpatients – to define its geographic service area for

purposes of the 2025 community health needs assessment. Using this definition, there are 24 ZIP Codes that defined 75 percent its admissions in 2024.

## Service Area Definition and Description

Note: Findings are based on 2025 demographic estimates

**Service Area Definition**  
USC Arcadia Hospital Service Area  
2025

ZIP Code	Community
91006 — 91007	Arcadia
91001	Altadena
91008	Bradbury
91010	Duarte
91016	Monrovia
91024	Sierra Madre
91104 and 91107	Pasadena
91108	San Marino
91702	Azusa

91773	San Dimas
91775 — 91776	San Gabriel
91780	Temple City
91790	West Covina
91801	Alhambra

*Note: USC Arcadia Hospital is located in Arcadia ZIP Code 91007*

*Source: USC Arcadia Hospital 2024 inpatient data analysis.*

The service area population (2025) is estimated at 836,523 persons. Total population in the service area is forecast to decrease 1.5 percent in the next five years, to 824,030 persons. The numbers of households and families are projected to decrease by 0.8 percent and 0.8 percent, respectively. The following table summarizes the service area population, households, and families as well as the percent change projected for 2030 (over a five-year period).

### Summary of Population, Households and Families

USC Arcadia Hospital Service Area

2025 and 2027

Description	Number		Percent Change From 2025 to 2030
	2025	2030	
Demographics			
Population	836,523	824,030	-1.5%
Households	269,811	267,710	-0.8%
Families	203,324	201,653	-0.8%

Source: Claritas

To provide context to the service area demographics, key statistics are compared to Los Angeles County for 2025 in the following table. Of note, in comparison to Los Angeles County, the USC Arcadia Hospital service area has a **higher** proportion of:

- Persons age 45 years and older
- Persons of Asian descent
- Persons speaking an Asian or Pacific Island language at home
- Persons with high school degrees and greater
- Households with 3 or more persons
- Households with incomes greater than \$50,000
- Households with children under 18 years of age
- Owner-occupied households
- Families at or above the poverty level

### Summary of Demographic Indicators

USC Arcadia Hospital Service Area Compared to Los Angeles County

2025

Indicator	Percent	
	Service Area	LA County
<b>5-Year Change (2025 to 2030)</b>

# Social Determinants of Health

Social determinants of health (SDOH) are certain environmental conditions where people are born, live, learn, work, play, worship and age that affect a wide range of health, functioning, and quality of life outcomes and risk. SDOH can be grouped into five domains:

- Economic stability
- Education access and quality
- Health care access and quality
- Neighborhood and built environment
- Social and community context

Note: Findings are based on the 2025 Claritas estimates of poverty status of families in USC Arcadia Hospital Service Area and 2024 California Health Interview Survey for SPA 3

When comparing social determinants of health indicators in the USCAH Service Area and SPA-3 to Healthy People 2030 objectives, SPA-3 did not meet the objectives related to: usual source of ongoing care, delays in getting medical care and delays in getting medications. The SPA experience compared to Healthy People 2030 objectives is summarized in the following table.

**Summary of Social Determinants of Health Indicators**  
USC Arcadia Hospital Service Area and SPA 3 Compared to Healthy People 2030 Objectives  
2024 and 2025

Indicator	Healthy People 2030 Objective	USC-AH & SPA 3 San Gabriel Valley
<b>Social Determinants of Health (2025 USC-AH Service Area)</b>		
Families by Poverty Status USC Arcadia Hospital Service Area	8%	8%
<b>Health Access (2024 SPA 3)</b>		
Insured All or Part of Year Age 0 to 64 Years	92.4%	96.5%
Usual Source of Ongoing Care All Ages	95.1%	85.1%
Delays in Getting Medical Care All Ages	5.9%	13.9%
Delays in Getting Medications All Ages	6.3%	8.4%

Sources: Claritas and UCLA Center for Health Policy Research-

## Mortality

Note: Findings are based on deaths among residents of the service area in 2023 and three-year averages of deaths that occurred among residents of Los Angeles County during 2021 through 2023

In 2023, there were 6,683 deaths in USC Arcadia Hospital service area. Heart disease and cancer were the top two leading causes of death in the service area, accounting for 44 percent of all deaths. Of note, coronary heart disease is the leading cause of death in USC Arcadia Hospital Service Area and the leading cause of premature death in Service Planning Area 3 (2019). Other leading causes of death in the service area are summarized in the table below.

### Profile of Deaths, Ranked by Select Leading Causes of Death

USC Arcadia Hospital Service Area

2023

Select Leading Cause of Death	Number	Percent
Diseases of the Heart	1,565	23.4%
Cancer	1,384	20.7%
Alzheimer's disease	392	5.9%
Cerebrovascular diseases	348	5.2%
Diabetes	298	4.5%
Accidents (Unintentional Injuries)	228	3.4%
Influenza and Pneumonia	201	3.0%
Chronic Lower Respiratory Diseases	176	2.6%
Essential Hypertension and Hypertensive Renal Disease	81	1.2%
Chronic Liver Disease and Cirrhosis	51	0.8%
Nephritis, Nephrotic Syndrome and Nephrosis	36	0.5%
Suicide	11	0.2%
Homicide	-	0.0%
Parkinson's Disease	-	0.0%
All Other Causes	1,912	28.6%
<b>All Causes (Total)</b>	<b>6,683</b>	<b>100.0%</b>

Source: California Department of Public Health

When comparing age-adjusted death rates in Los Angeles County to Healthy People 2030 objectives, the County did not meet the objectives related to: coronary heart disease, colorectal cancer, female breast cancer, homicide, and chronic liver disease and cirrhosis deaths. The County experience compared to Healthy People 2030 national objectives is summarized in the table below.

**Summary of Age-Adjusted Death Rates by Cause of Death**

Los Angeles County Compared to Healthy People 2030 Objectives

*Deaths per 100,000 population*

*Three-Year Average (2021 to 2023)*

Indicator	Healthy People 2030 Objective	Los Angeles County
<b>Health Status</b>		
Coronary Heart Disease	71.1	84.4
Stroke	33.4	30.3
Cancer (All Sites)	122.7	112.1
Lung	25.1	17.4
Colorectal	8.9	11.3
Prostate	16.9	16.0
Female Breast	15.3	17.1
Unintentional Injuries (All Types)	43.2	40.8
Motor Vehicle Accidents	10.1	10.0
Homicide	5.5	7.3
Suicide	12.8	8.0
Chronic Liver Disease and Cirrhosis	10.9	14.7

*Note: Rates are per 100,000 persons and are standardized to the 2000 U.S. Standard Million population*

*Source: California Department of Public Health*

## Maternal and Infant Health

Note: Findings are based on live births that occurred in the service area during 2021 to 2023, three-year averages of pregnancy and birth outcomes that occurred among residents of Los Angeles County during 2021 to 2023, and three-year averages of infant mortality among infants during 2020 to 2022

On average, there were 7,605 live births per year in USC Arcadia Hospital's service area during the three-year period from 2021 through 2023.

### Number of Live Births

USC Arcadia Hospital Service Area

*Three-Year Average (2021 to 2023)*

Year	Number of Births
2021	7,722
2022	7,638
2023	7,456
<b>Three-Year Average</b>	<b>7,605</b>

*Source: California Department of Public Health*

When comparing maternal and infant health indicators in Los Angeles County to Healthy People 2030 objectives, the county did not meet the objective for adequacy of prenatal care. The county experience compared to Healthy People 2030 national objectives is summarized in the table below.

### Summary of Maternal and Infant Health Indicators

Los Angeles County, California and Healthy People 2030 Targets

*2021 to 2023 and 2020 to 2022*

	Healthy People 2030 Objective	Los Angeles County
<b>Health Access (2021 to 2023)</b>		
Adequate/Adequate Plus Prenatal Care	80.5%	75.7%
<b>Infant Mortality (2020 to 2022)</b>		
Infant Mortality	5.0	3.6

*Source: California Department of Public Health*

# Child Health

Note: Findings are based on 2024 California Health Interview Survey for SPA 3

When comparing child and adolescent health to Healthy People 2030 objectives, SPA 3 did not meet the health access objective related to usual source of ongoing care. Note: Other measures of child health were statistically unreliable.

**Summary of Child and Adolescent Health Indicators**

SPA 3 Compared to Healthy People 2030 Objectives  
2024

Indicator	Healthy People 2030 Objective	SPA 3 San Gabriel Valley
Health Access		
Usual Source of Ongoing Care	100%	86%

Source: UCLA Center for Health Policy Research

# Adult Health

Note: Findings are based on 2024 California Health Interview Survey for SPA 3

When comparing adult health indicators in SPA 3 to Healthy People 2030 objectives, the SPA 3 population exceeded the objective for percent insured, but did not meet the objective for percentage of adults with a usual source of ongoing care.

**Summary of Adult Health Indicators**  
SPA 3 Compared to Healthy People 2030 Objectives  
2024

Indicator	Healthy People 2030 Objective	SPA 3 San Gabriel Valley
<b>Health Access</b>		
Insured All or Part of Year	92.4%	95.4%
Usual Source of Ongoing Care	95.1%	82.8%
<b>Health Behaviors</b>		
Engaged in Binge Drinking in Past Month	22.7%	13.2%

Source: UCLA Center for Health Policy Research

# Senior Health

Note: Findings are based on 2024 California Health Interview Survey for SPA 3

When comparing senior health indicators in SPA 3 to Healthy People 2030 objectives, the SPA exceeded the objective for percent of population who currently smoke cigarettes.

**Summary of Senior Health Indicators**  
SPA 3 Compared to Healthy People 2030 Objectives  
2024

Indicator	Healthy People 2020 Objective	SPA 3 San Gabriel Valley
Health Behaviors		
Currently Smoke Cigarettes	6.1%	3.1%

Source: UCLA Center for Health Policy Research

## Community Consultation

Note: Findings are based on analysis of interviews with representatives of community and public organizations in the San Gabriel Valley conducted in October through November 2025.

For additional information, see Section 11: Community Consultation.

The following were identified as the community's top health issues (based on frequency of overall mention):

- Chronic disease
- Mental health and substance abuse
- Aging and elderly care
- Access to health care services
- Social and environmental challenges

## Process and Criteria Used

In preparing its community health needs assessment, USC Arcadia Hospital combined quantitative data about service area demographics, availability of health insurance, access to and utilization of key services, health status, and health behaviors with qualitative data, including opinions of community leaders regarding important health issues in the community. Many who provided their opinion – including local health providers and representatives from Los Angeles County Departments of Public Health – are active locally in the community and offer valuable perspectives.

The following criteria were used to identify and prioritize significant health needs in the community:

- Healthy People 2030 targets not met
- Foci of Healthy People 2030 – includes health conditions, health behaviors, populations/vulnerable persons, and Social Determinants of Health (SDOH)
- Number of persons affected
- Evidence-based
- Identification and/or validation as an important health issue by interviewees in the community consultation
- Identified by community organizations as an opportunity to work collaboratively to address health issue

## **Significant Health Needs Identified**

- Screening and management of chronic disease and other conditions related to aging
- Access to health services
- Availability of mental health and substance abuse services

## **Health Care Facilities and Other Resources**

The following healthcare facilities and other resources are located in the ZIP codes of USC Arcadia Hospital's service area:

- 17 open hospitals (14 general acute care hospitals and three acute psychiatric hospitals) with 8 emergency departments
- 29 licensed free and community clinics
- 15 senior/community centers

## Section 2: Process and Methods

This section includes:

---

- Description of secondary data and information
- Description of analytical methods applied
- Identification of information gaps
- Summary of process for community consultation
- Identification of third-party contractor

## **Demographics and Health Data and Information**

This community health needs assessment brings together a variety of demographic and health information, gathered from both primary and secondary data sources.

The first phase of the community health needs assessment involved collection and analysis of numerous demographic and health status and data and information for USC Arcadia Hospital Service Area, Service Planning Area (SPA) 3 – San Gabriel Valley, and Los Angeles County. The following types of data were analyzed: population, household and family demographics; birth statistics, death statistics, recent counts of homelessness, education statistics, designated Health Professional Shortage Areas, large-scale household telephone surveys designed to measure health access, utilization of health services, and health behaviors. This 2025 Community Health Needs Assessment includes a description of the Social Determinants of Health (SDOH) – economic stability, education access and quality, health care access and quality, neighborhood and built environment, and social and community context – using the framework developed in Health People 2030. Wherever possible, the SPA 3 or Los Angeles County health experience was benchmarked to Healthy People 2030 objectives. In addition, to assist with providing context to the demographics, USC Arcadia Hospital Service Area is compared to Los Angeles County.

The second phase of the needs assessment focused on qualitative primary research. Representatives from USC Arcadia Hospital agreed that telephone interviews with public health department contacts and representatives from public and private community organizations would be a cost effective approach to gain an understanding of important health issues and potential opportunities to collaborate with these organizations. In addition, to reduce telephone calls to some of the interview contacts, member hospitals participating in the Health Consortium of Greater San Gabriel Valley shared interview transcripts; these findings were reviewed and incorporated in the USC Arcadia Hospital community consultation.

### **Sources of the Data**

The following sources of data and information were used in this community health needs assessment:

- Claritas, Inc.
- California Department of Education
- California Department of Finance
- California Department of Public Health
- Center for Social Sciences Research at University of California at Berkeley
- Department of Health Care Access and Information (HCAI)
- Los Angeles County Department of Public Health
- Los Angeles Homeless Services Authority

- Los Angeles County Aging and Disabilities Department
- UCLA Center for Health Policy Research – AskCHIS (California Health Interview Survey) online query system
- United States Department of Health and Human Services (HHS)
- USC Dornsife Center for Economic and Social Research (CESR)

## Dates of the Data

All data and information reviewed in the community health needs assessment used the most recent available. The table below summarizes the dates of the data used.

**Dates of the Data Used in the Community Health Needs Assessment**

Description	Date of Data
Demographics	2025
Homeless Persons	2025
Primary Care Shortage Areas	2025
Health Access and Utilization	2024
Deaths	2023
Death Rates	2021 – 2023

Child Abuse and Neglect	2023 – 2024
Health Care Facilities and Resources	2025

## Analytical Methods Applied

In many instances, health status information is based on multiple years of data and was used to establish three-year averages for the service area. Widely accepted demographics and health measurements – such as persons with limited English proficiency, average household size and income, health insurance coverage, usual source of care, ability to get medical care and prescription medicines when needed, tobacco use, binge drinking, age-adjusted death rates, and pregnant women with adequate prenatal care – were used in this community health needs assessment. To assist with

prioritization of health issues, secondary data and information is benchmarked to Health People 2030 national objectives.<sup>1</sup> In addition, comparisons to local, regional, and state figures are applied. The report continues to apply the updated guidelines of Healthy People 2030, the most recent nationwide agenda for health and well-being addressing health conditions, health behaviors, population groups, settings and systems, and social determinants of health – including health care access and quality.

## **Information Gaps**

Information gaps were most apparent in the following areas:

- Availability of quantitative data on effect of Eaton fires
- Availability of extensive local data related to social determinants of health, as defined in Healthy People 2030 (e.g., economic stability, education access and quality, health care access and quality, neighborhood and built environment and social and community context)
- Availability of measures of food insecurity in USC Arcadia Hospital service area
- Availability of local (ZIP Code) data on maternal births (e.g., age group of mother, race/ethnicity of mother), birth outcomes, and infant outcomes (e.g., infant mortality)
- Availability of local (ZIP Code) data on mortality (e.g., number of deaths by age group for leading causes of death such as coronary heart disease, stroke and cancer)
- Updated data on Years of Potential Life Lost Before Age 75
- Limitations on some statistically reliable health data by age groups (such as children, adults, and seniors) in the service area
- Statistically reliable health data by race/ethnicity in the service area

## **Community Consultation**

### **Process**

USC Arcadia Hospital leadership and staff identified twenty contacts for telephone interviews. Individuals selected for interviews represented city and county departments in the hospital services area, non-profit community-based health and social organizations serving populations such as the poor, seniors, and Chinese residents. The project consultant recommended that the hospital use the same open-ended questions as applied in prior community health needs assessments, so as to obtain respondents opinions of important health issues, without favoring prompted questions. Once individuals confirmed interest in participation, a letter – describing the purpose of the phone survey and

---

<sup>1</sup> Prepared by the U.S. Department of Health and Human Services, Health People 2030 outlines a nationwide agenda focused on promoting health and preventing illness, disability, and premature death. Health People 2030 builds on initiatives pursued over the past three decades.

the questions to be posed in the upcoming telephone interview – was distributed electronically (via email).

Members of the Health Consortium of Greater San Gabriel Valley shared transcripts and results of the participating hospitals community input. These findings and summaries were reviewed and incorporated in this Community Health Needs Assessment.

## **Third-Party Contractor**

USC Arcadia Hospital retained Debbie N. Alpers (previously DNA and Company, Inc.) to prepare this Community Health Needs Assessment. USC Arcadia Hospital has worked with Ms. Alpers since 1998 to conduct a triennial community needs assessment, in compliance with California Senate Bill 697, community benefits legislation. Following the enactment of Senate Bill 697 in 1994, Ms. Alpers was endorsed by the Healthcare Association of Southern California (HASC) to assist its member hospitals in the design and completion of service area specific community needs assessments. In the ten cycles of needs assessments that began in 1995, Ms. Alpers has completed over 80 hospital needs assessments, in addition to assessments conducted for health care organizations and clinics.

## Section 3: Service Area Definition and Demographics

This section includes:

---

- Description of how the USC Arcadia Hospital Service Area was determined
- Definition of USC Arcadia Hospital Service Area
- Demographics of USC Arcadia Hospital Service Area, including population, household and family characteristics
- Description of the homeless population in SPA 3
- Demographics of USC Arcadia Hospital Service Area compared to Los Angeles County

Detailed information – at the ZIP Code level – can be found in:

---

- Appendix A: Service Area Description
- Appendix B: Age Group Detail

## Determination of Service Area for Purposes of the Needs Assessment

USC Arcadia Hospital used the Stark II definition – the lowest number of contiguous ZIP Codes from which the hospital draws at least 75 percent of its inpatients – to define its geographic service area for purposes of the 2025 community health needs assessment. Using this definition, there are 24 ZIP Codes that defined 75 percent its admissions in 2024.

## Definition of Service Area for Purposes of the Needs Assessment

For purposes of the 2025 Community Needs Assessment, USC Arcadia Hospital defined its service area to include the following ZIP codes/communities.

### Service Area Definition

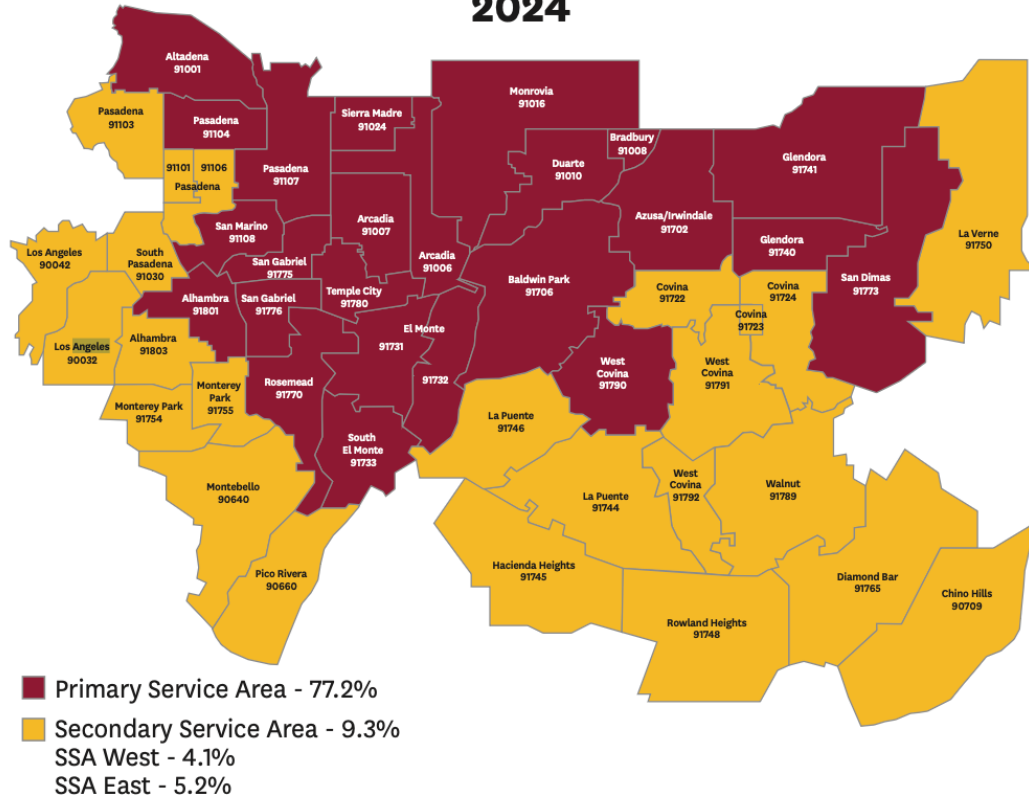

USC Arcadia Hospital Service Area  
2025

ZIP Code	Community
91006 — 91007	Arcadia
91001	Altadena
91008	Bradbury
91010	Duarte
91016	Monrovia
91024	Sierra Madre
91104 and 91107	Pasadena
91108	San Marino
91702	Azusa
91706	Baldwin Park
91731 — 91732	El Monte
91733	South El Monte
91740 — 91741	Glendora
91770	Rosemead
91773	San Dimas
91775 — 91776	San Gabriel
91780	Temple City
91790	West Covina
91801	Alhambra

*Note: USC Arcadia Hospital is located in Arcadia ZIP Code 91007*

*Source: USC Arcadia Hospital 2024 inpatient origin analysis.*

## USC Arcadia Hospital Service Area 2024

USC-0025

# Population

**What's Being Measured** The service area population for estimated 2025 and projected 2030.

**How the Measure is Defined** The number of persons living in the service area. The change in number of persons is calculated by subtracting the estimated 2025 population from the projected 2030 population. The change in percent is calculated by dividing the change in number of persons by the 2025 population.

## Race/Ethnicity

**What's Being Measured** Race/ethnicity for the population.

**How the Measure is Defined** There is no universally accepted definition for Hispanic “race.” The Census currently defines “Hispanic or Latino” as an ethnicity, not a race. In the race question for Census 2010, the option of marking one or more race categories was given. People who marked only one race are referred to as the race alone population. Those who marked more than one race are referred to as the two or more races population. All respondents who marked more than one race are collapsed into this category. The question on Hispanic origin asked respondents if they are Spanish, Hispanic or Latino.

For purposes of the 2025 Community Needs Assessment, the following eight race/ethnicity groupings are used: (1) White is non-Hispanic White and includes persons having origins in any of the original peoples of Europe, the Middle East, or North Africa. It includes people who indicate their race as “White” or report entries such as Irish, German, Italian, Lebanese, Near Easterner, Arab or Polish. (2) Black is non-Hispanic Black and includes persons having origins in any of the Black racial groups of Africa. It includes people who indicate their race as “Black or African American” or provide written entries such as African American, Kenyan, Nigerian or Haitian. (3) American Indian and Alaskan Native is non-Hispanic American Indian and Alaskan Native and includes persons having origins in any of the original peoples of North and South America (including Central America) and who maintain tribal affiliation or community attachment. (4) Asian is non-Hispanic Asian and includes persons having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent, including, for example, Cambodia, China, India, Japan, Korea, Vietnam, Malaysia, Pakistan, the Philippine Islands, and Thailand. It includes people who provide written entries such as Asian Indian, Chinese, Filipino, Korean, Japanese, Vietnamese, and other Asian. (5) Native Hawaiian/Pacific Islander is non-Hispanic Native Hawaiian/Pacific Islander and includes persons having origins in Hawaii, Guam, Samoa, or other Pacific Islands. (6) Hispanic is Hispanic or Latino and includes the total of all those who identified themselves as Hispanic or Latino. (7) Some Other Race is non-Hispanic some other race and includes all other responses not included in the categories above. (8) Two or More Races is non-Hispanic two or more races.

The sum of these eight race/Hispanic ethnicity categories is the 2025 total population.

## Employment Status for Persons 16 Years and Older

**What's Being Measured** Employment status for persons age 16 years and older.

**How the Measure is Defined** Employment status is grouped into the following four categories: (1) persons in the labor force and employed, (2) persons in the labor force and unemployed (e.g., not at work and were looking for work and available to accept a job), (3) persons in the armed forces serving active duty with the United States Army, Air Force, Navy, Marine Corps or Coast Guard, and (4) persons who are not classified as members of the labor force (consists mainly of students, housewives, retired workers, seasonal workers enumerated in an off season who were not looking for work, institutionalized persons, and persons doing only incidental unpaid family work). The sum of these four groupings for employment status is the 2025 population age 16 years and older.

### **USCAH Service Area**

## Occupation Type for Employed Labor Force

**What's Being Measured** Occupation classification of employed labor force.

**How the Measure is Defined** Occupations are grouped into the following three types: (1) white collar (includes occupations of management/business/financial operations, professional and related occupations, sales and office), (2) blue collar (includes occupations of construction and transportation/material moving), and (3) service and farming. The sum of these three categories is 2025 employed labor force.

# Households

**What's Being Measured** Households in the service area for estimated 2025 and projected 2030.

**How the Measure is Defined** A household is considered a housing unit, occupied by either a single person or two or more related or unrelated persons. Units occupied by ten or more unrelated individuals are called group quarters, not households. The change in number of households is calculated by subtracting the estimated 2025 households from the projected 2030 households. The change in percent is calculated the dividing the change in number of households by the 2025 households.

## USCAH Service Area

## Group Quarters Population by Type

**What's Being Measured** The population living in group quarters.

**How the Measure is Defined** Group quarters is a type of residence inhabited by ten or more persons, unrelated to the householder and includes the following seven types: (1) college/university student housing, (2) military quarters, (3) other non-institutional facilities, (4) correctional facilities for adults, (5) juvenile facilities, (6) nursing home, and (7) other institutional facilities. The sum of these seven group quarters types is the 2025 population living in group quarters.

## Persons Per Household and Average Household Size

**What's Being Measured** Persons per household and average household size.

**How the Measure is Defined** The number of households is reported for the following seven household size categories: 1-person, 2-persons, 3-persons, 4-persons, 5-persons, 6-persons, and 7 or more persons. The sum of these seven categories household size is the 2025 total households. Average household size is calculated by dividing the total population living in households by the total number of households.

## Households by Presence of Children Under 18 Years of Age

**What's Being Measured** Households are described by the presence of one or more persons under 18 years of age (children) living in the household.

**How the Measure is Defined** Households with children living in the household may include married couple families, families with male householders (no wives), families with female householders (no husbands), and non-family households. The sum of these two household descriptions is the 2025 total households.

### USCAH Service Area

# Households by Income Group and Average Household Income

**What's Being Measured** Households in various income groupings.

**How the Measure is Defined** Household income includes the total money received in the stated calendar year by all household members 15 years and older. The income is presented in terms of current dollars for 2025. The number of households with an annual household income is reported for the following 12 income groups: (1) under \$15,000; (2) \$15,000 to \$24,999; (3) \$25,000 to \$34,999; (4) \$35,000 to \$49,999; (5) \$50,000 to \$74,999; (6) \$75,000 to \$99,999; (7) \$100,000 to \$124,999; (8) \$125,000 to \$149,999; (9) \$150,000 to \$199,999; (10) \$200,000 to \$249,999; (11) \$250,000 to \$499,999; and (12) \$500,000 and over. The sum of households with these 12 income groupings is the 2025 total households. Average household income is calculated the dividing the total income of an area by the number of households in the area.

# Households by Age of Head of Household

**What's Being Measured** The number of households by age group of the head of household.

**How the Measure is Defined** The head of households is reported for the following eight age groups: (1) 15 to 24 years, (2) 25 to 34 years, (3) 35 to 44 years, (4) 45 to 54 years, (5) 55 to 64 years, (6) 65 to 74 years, (7) 75 to 84 years, and (8) 85 years and older. The sum of the households headed by persons in these age groups is the 2025 total households.

## Owner-Occupied and Renter-Occupied Housing Units

**What's Being Measured** Owner-occupied housing units and renter-occupied housing units for estimated 2025.

**How the Measure is Defined** A housing unit is owner-occupied if the owner or co-owner lives in the unit. All occupied housing units that are not owner-occupied, whether they are rented for cash rent or occupied without payment of cash rent, are classified as renter-occupied (units may be provided free of rent by friends or relatives in exchange for services, such as resident manager, caretaker, or tenant farmer). Housing units on military bases are also classified in the “no cash rent” category. The sum of owner-occupied housing units and renter-occupied housing units is the 2025 total occupied housing units.

### USCAH Service Area

# Families

**What's Being Measured** The number of families (family households) for estimated 2025 and projected 2030.

**How the Measure is Defined** A family household consists of a householder and one or more other persons living in the same household who are related to the householder by birth, marriage or adoption. All persons who are related to the householder are regarded as members of his or her family. The change in number of families is calculated by subtracting the estimated 2025 families from the projected 2030 families. The change in percent is calculated the dividing the change in number of families by the 2025 families.

## USCAH Service Area

# Homeless Population

**What's Being Measured** Count of homeless population.

**How the Measure is Defined** To accurately enumerate the homeless population in Los Angeles County, a point-in-time census was conducted on February 2025, with the support of volunteers, partners and community service providers. In this study, the U.S. Department of Housing and Urban Development's definition of homelessness was used. The definition is an individual who lacks a fixed, regular and adequate nighttime residence and an individual who has a primary nighttime residence that is a supervised publicly or privately operated shelter designed to provide temporary living accommodations or an institution that provides a temporary residence for individuals intended to be institutionalized or a public or private place not designated for, or ordinarily used as, a regular sleeping accommodation for human beings.

Population	836,523	824,030	-1.5%
Households	269,811	267,710	-0.8%
Families	203,324	201,653	-0.8%

Source: Claritas

To assist with providing context to the service area demographics, key statistics are compared to Los Angeles County for 2025 in the following table. Of note, in comparison to Los Angeles County, USC Arcadia Hospital service area has a **higher** proportion of:

- Persons age 45 to 85 years and older
- Persons of Asian race
- Persons 5 years and older speaking an Asian or Pacific Island language at home
- Persons 25 years and older with high school or GED graduate, Associate's Degree, Master's Degree, or Doctorate Degree
- Persons 16 years and older not in the labor force
- Employed persons with white and blue collar occupations
- Households with 3-persons, 4-persons, 5-persons, 6-persons and 7 or more persons
- Households with children under 18 years of age present
- Households with incomes of \$50,000 to \$499,999
- Households with heads of household age 45 to 85 years and older

- Owner-occupied households
- Families at or above the poverty level

# Section 4: Social Determinants of Health

This section includes:

---

- Introduction of Social Determinants of Health (SDOH) Domains
- Summary of families by poverty status in USC Arcadia Hospital Service Area
- Summary of household food insecurity
- Four-Year Adjusted Graduation Rate for school districts in USC Arcadia Hospital Service Area
- Primary Care Health Professional Shortages Areas (HPSAs)
- Findings from the 2024 California Health Interview Survey for SPA 3 benchmarked to Healthy People 2030 targets
- Summary of Social Determinants of Health compared to Healthy People 2030 and Los Angeles County and California

Key used to summarize SPA 3 experiences benchmarked to Healthy People 2030 Targets:

---

Target Met  
Target Not Met

## What are Social Determinants of Health?

Social determinants of health (SDOH) are the conditions in the environments where people are born, live, learn, work, play, worship and age that affect a wide range of health, functioning, and quality of life outcomes and risks. SDOH can be grouped into five domains:

- Economic stability

In the United States, 1 in 10 people live in poverty and many people can't afford things like healthy foods, health care, and housing. Healthy People 2030 focuses on helping more people achieve economic stability.

People with steady employment are less likely to live in poverty and more likely to be healthy. But many people have trouble finding and keeping a job. People with disabilities, injuries, or conditions like arthritis may be especially limited in their ability to work. In addition, many people with steady work still don't earn enough to afford the things they need to stay healthy.

Employment programs, career counseling, and high-quality childcare opportunities can help more people find and keep jobs. In addition, policies to help people pay for food, housing, health care, and education can reduce poverty and improve health and well-being.

- Education access and quality

People with higher levels of education are more likely to be healthier and live longer. Healthy People 2030 focuses on providing high-quality educational opportunities for children and adolescents — and on helping them do well in school.

Children from low-income families, children with disabilities, and children who routinely experience forms of social discrimination — like bullying — are more likely to struggle with math and reading. These groups are also less likely to graduate from high school or go to college. This means they are less likely to get safe, high-paying jobs and more likely to have health problems like heart disease, diabetes, and depression.

In addition, some children live in places with poorly performing schools, and many families can't afford to send their children to college. The stress of living in poverty can also affect children's brain development, making it harder for them to do well in school. Interventions to help children and adolescents do well in school and help families pay for college can have long-term health benefits.

- Health care access and quality

Many people in the United States don't get the health care services they need. Healthy People 2030 focuses on improving health by helping people get timely, high-quality health care services.

About 1 in 10 people in the United States don't have health insurance. People without insurance are less likely to have a primary care provider, and may not be able to afford the health services and medications they need. Strategies to increase insurance coverage rates are critical for making sure that more people are able to receive needed health services, including preventive care and treatment for chronic illnesses.

People often do not get recommended health services, like cancer screenings, because they don't have a primary care provider. Other times, it's because they live too far away from healthcare providers. Interventions to increase access to healthcare professionals and improve communication — in person or remotely — can help more people get the care they need.

- Neighborhood and built environment

The neighborhoods where people live have a major impact on health and well-being. Healthy People 2030 focuses on improving health and safety in the places where people are born, live, learn, work, play, worship, and age.

Many people in the United States live in neighborhoods with high rates of violence, unsafe air or water, and other health and safety risks. Racial/ethnic minorities and people with low incomes are more likely to live in places with these risks. In addition, some people are exposed to things at work that can harm their health, like secondhand smoke or loud noises.

Interventions and policy changes at the local, state, and federal level can help reduce these health and safety risks and promote health. For example, providing opportunities for people to walk and bike in their communities —by adding sidewalks and bike lanes — can increase safety and help improve health and quality of life.

- Social and community context

People's relationships and interactions with family, friends, co-workers, and community members can have a major impact on their health and well-being. Healthy People 2030 focuses on helping people get the social support they need in the places where they are born, live, learn, work, play, worship, and age.

Many people face challenges and dangers they can't control — like unsafe neighborhoods, discrimination, or trouble affording the things they need. This can have a negative impact on health and safety throughout life.

Positive relationships at home, at work, and in the community can help reduce these negative impacts. But some people — like children whose parents are in jail and adolescents who are bullied — often don't get support from loved ones or others. Interventions to help people get the social and community support they need are critical for improving health and well-being.

Measures available for these domains are reviewed on the next pages and compared to Healthy People 2030 objectives, where possible.

## Families by Poverty Status

**What's Being Measured** Families below the poverty level and at or above the poverty level.

**How the Measure is Defined** The U.S. Census Bureau uses the federal government's official poverty definition. Families are reported as either (1) below the federal poverty level or (2) at/above the federal poverty level. The sum of these two groupings is the 2025 families.

**Why the Measurement is Helpful** People living in poverty are less likely to have access to health care, healthy food, stable housing, and opportunities for physical activity. These disparities mean people living in poverty are more likely to die from preventable diseases. Programs and policies that make food, housing, health care, and education more affordable can help reduce poverty.

**Healthy People 2030 Objective** Reduce the proportion of persons living in poverty to 8.0%

### **USCAH Service Area**

**Measurement Period** 2025

8.3% of families live below the poverty level

**Source of Data** UCLA Center for Health Policy Research

### **Families by Poverty Status**

USC Arcadia Hospital Service Area

2025

Poverty Status	Number of Families	Percent of Total Families
Below the Poverty Level	16,952	8.3%
At or Above the Poverty Level	186,372	91.7%
<b>Total Families</b>	<b>203,324</b>	<b>100.0%</b>

Source: Claritas

## Los Angeles County

### **Families by Poverty Status**

Los Angeles County

2025

<b>Poverty Status</b>	<b>Number of Families</b>	<b>Percent of Total Families</b>
Below the Poverty Level	226,027	10.2%
At or Above the Poverty Level	1,991,957	89.8%
<b>Total Families</b>	<b>2,217,984</b>	<b>100.0%</b>

Source: Claritas

# Household Food Insecurity

**What's Being Measured** Lack of access to enough food to live an active, healthy life because of limited money or other resources.

**How the Measure is Defined** Number of households classified as food insecure (including low food security and very low food security over a 12-month period. Data is from the *University of Southern California Understanding America Study*, administered by the USC Dornsife Center for Economic and Social Research (CESR)

**Why the Measurement is Helpful** Food and nutrition insecurity is when people don't have enough to eat and don't know where their next meal will come from. It is linked to negative health outcomes in children and adults, and it may cause children to have trouble in school. Giving more people benefits through nutrition assistance programs, increasing benefit amounts, and addressing unemployment may help reduce food insecurity and hunger. In Los Angeles County, food insecurity is a complex and widespread challenge influenced by high costs of living, challenges to obtaining a living wage and limited access to affordable food.

**Healthy People 2030 Objective** Reduce household (food) insecurity to 6.0%

## **Los Angeles County**

**Measurement Period** 2023

25% of all households experienced food insecurity in the past year

**Source of Data** USC Dornsife Center for Economic and Social Research (CESR)

## Four-Year Adjusted Graduation Rate

**What's Being Measured** Four-year adjusted cohort graduation rate for the selected year

**How the Measure is Defined** The four-year adjusted graduation rate (ACGR) is the number of students who graduate from high school in four years with a regular high school diploma divided by the number of students who form the adjusted cohort for the graduating class. The four-year cohort is based on the number of students who enter grade 9 for the first time adjusted by adding into the cohort any student who transfers in later during grade 9 or during the next three years and subtracting any student from the cohort who transfers out, emigrates to another country, transfers to a prison or juvenile facility or dies during that same period. For the ACGR, a “regular high school diploma” is the standard high school diploma awarded to the preponderance of students in a State that is fully aligned with the State’s standards and does not include a general equivalency diploma, certificate of completion, certificate of attendance, or any other similar or lesser credential, such as a diploma based on meeting Individualized Education Program goals. Data is for the 2023/2024 school year and is from the California Department of Education website.

**Why the Measurement is Helpful** There’s a strong connection between education and health – for example, higher levels of education are linked to a lower risk of death later in life. But many high school students don’t graduate, and graduation rates are lower in some racial/ethnic groups. Programs including vocational training, alternative schools, social-emotional skills training, and counseling can help more students graduate from high school.

**Healthy People 2030 Objective** Increase the proportion of high school students who graduate in four years with a regular diploma to 90.7%.

### **USCAH Service Area**

#### **Four-Year Adjusted Graduation Rate**

School Districts in USC Arcadia Hospital Service Area

*2023/2024 School Year*

School District	Graduation Rate
Alhambra Unified	92.0%
Arcadia Unified	97.0%
Azusa Unified	83.8%
Baldwin Park Unified	91.5%
Duarte Unified	94.8%

<b>School District</b>	<b>Graduation Rate</b>
El Monte Union High	84.7%
Glendora Unified	95.6%

Pasadena Unified	88.2%
San Gabriel Unified	94.1%
San Marino Unified	98.5%
Temple City Unified	96.9%
<b>Comparison Data</b>	
Los Angeles County	89.5%
California	90.2%

*Source: California Department of Education*

## Primary Care Health Professional Shortage Areas

**What's Being Measured** A federal Health Professional Shortage Area (HPSA) can be a geographic area, population area, or a facility, identified as having a shortage of primary care health care providers.

**How the Measure is Defined** Primary care HPSAs are designated by class (Primary Care, Dental Health or Mental Health) by the US Health Resources and Services Administration (HRSA). A HPSA Score, developed by the National Health Service Corps (NHSC), is used for determining priorities for assignment of clinicians. The Scores range from 0 to 26 where the higher the score, the greater the priority.

### USCAH Service Area

#### **Primary Care Health Professional Shortage Areas**

HPSA Designations in USC Arcadia Hospital Service Area, by Location and Designation Dates

2024

HPSA Name	Location ZIP Code	HPSA Score	Designation Date	Last Update Date
Central City Community Health Center, Inc.	91770	16	8/1/08	9/11/21
Herald Christian Health Center	91770	15	11/1/13	9/11/21
Buddhist Tzu Chi Medical Foundation	91731	14	12/22/20	4/20/23

Source: United States Department of Health and Human Services – Health Resources and Services Administration.

# Medical Insurance

**What's Being Measured** Persons under age 65 years with medical insurance the entire past year or only part of the past year.

**How the Measure is Defined** The percentage of persons with health insurance includes persons with any type of public or private health insurance. Insured persons include those with health insurance for all or part of the year. Results are from the 2024 California Health Interview Survey.

**Why the Measurement is Helpful** About 1 in 10 people in the United States have no health insurance. People without health insurance are less likely to have a primary care provider and may not be able to afford the health services and medications they need. Strategies to increase insurance coverage rates are critical for enabling more people to get needed health care services, like preventive care and treatment for chronic illnesses.

**Healthy People 2030 Objective** Increase the proportion of persons under age 65 years with medical insurance to 92.4%.

## **SPA 3 (San Gabriel Valley)**

**Measurement Period** 2024

96.5% of persons age 0 to 64 years had medical insurance the entire year or part of the past year

**Source of Data** UCLA Center for Health Policy Research

## Source of Ongoing Care

**What's Being Measured** Persons of all ages with a specific source of ongoing care

**How the Measure is Defined** Specific sources of ongoing care may include any of the following: doctor's office/HMO/Kaiser, community, government or hospital clinic, emergency room/urgent care, health center facility, or some other place. Results are from the 2024 California Health Interview Survey.

**Why the Measurement is Helpful** Access to care depends in part on access to an ongoing source of care. People with a usual source of health care are more likely than those without a usual source of care to receive a variety of preventive health care services. An estimated 15 percent of adults in the US lack a usual source of care; an estimated 7 percent of children age 17 years and under lack a specific source of ongoing care. Uninsured persons under age 65 years are more likely to lack a usual source of care than those who have either public or private health insurance.

**Healthy People 2030 Objective** Increase the proportion of persons of all ages who report that they have a usual primary care provider (e.g., doctor's office, health center or other place) to 95.1%  
Note: The Healthy People 2030 objective excludes emergency rooms as a usual source of care.

### **SPA 3 (San Gabriel Valley)**

**Measurement Period** 2024

85.1% have a usual source of ongoing care

**Source of Data** UCLA Center for Health Policy Research

# Delays in Getting Medical Care

**What's Being Measured** Persons of all ages who reported delays in getting needed medical care.

**How the Measure is Defined** Respondents were asked if they experienced any delays or did not get needed medical care (doctor, specialist or other health professional). Results are from the 2024 California Health Interview Survey.

**Why the Measurement is Helpful** Delaying medical care can negatively impact health and increase the cost of care. People who can't get care when they need may have more preventable complications, hospitalizations, emotional stress, and higher costs. Strategies to increase insurance coverage rates and improve health information technology may help reduce delays in care.

**Healthy People 2030 Objective** Reduce the proportion of persons who are unable to obtain or delay in obtaining necessary medical care to 5.9%

## **SPA 3 (San Gabriel Valley)**

**Measurement Period** 2024

13.9% experienced delays in getting needed medical care

## **Main Reasons Reported for Delays in Getting Medical Care in SPA 3**

- Healthcare system/provider issues and barriers (41.9%)
- Personal and other reasons (36.1%)
- Cost, lack of insurance, or other insurance related reasons (22.0%)

**Source of Data** UCLA Center for Health Policy Research

# Delays in Getting Prescription Medications

**What's Being Measured** The proportion of persons who reported delays or didn't get prescription medicines.

**How the Measure is Defined** Respondents were asked if they experienced any delays or did not get needed medicines that a doctor prescribed. Results are from the 2024 California Health Interview Survey.

**Why the Measurement is Helpful** Prescription medicines are critical for managing many common diseases and disorders. When people can't get the medicines they need, treatable conditions may get worse. Evidence shows that the most effective approaches for reducing delays and difficulty in getting prescription medicines involve addressing financial barriers and increasing insurance coverage.

**Healthy People 2030 Objective** Reduce the proportion of all persons of who are unable to obtain or delay in obtaining necessary prescription medicines to 6.3%

## **SPA 3 (San Gabriel Valley)**

**Measurement Period** 2024

8.4% experienced delays in getting prescription medications

**Source of Data** UCLA Center for Health Policy Research

# Summary of Social Determinants of Health and Comparison to Healthy People 2030 Targets

Note: Findings are based on the 2025 Claritas estimates of poverty status of families in USC Arcadia Hospital Service Area and 2024 California Health Interview Survey for SPA 3

When comparing social determinants of health indicators in the USC Arcadia Hospital Service Area and/or SPA 3 to Healthy People 2030 objectives, the SPA did not meet the objectives related to: usual source of ongoing care, delays in getting medical care and delays in getting medications. The SPA experience compared to Healthy People 2030 objectives as well as Los Angeles County and California rates is summarized in the following table.

## Summary of Social Determinants of Health Indicators

USC Arcadia Hospital Service Area and SPA 3 Compared to Los Angeles County, California and Healthy People 2030 Targets  
2024 and 2025

Indicator	USCAH SA & SPA 3		County Rate	California Rate	Target Rate
	Rate	Status			
Social Determinants of Health (2025 USC-AH Service Area)					
Families by Poverty Status USC-AH Service Area	8%	+	10%	n/a	8%
Health Access (2024 SPA 3)					
Insured All or Part of Year Age 0 to 64 Years	96.5%	+	94.8%	95.6%	92.4%
Usual Source of Ongoing Care All Ages	85.1%	-	83.6%	85.4%	95.1%
Delays in Getting Medical Care All Ages	13.9%	-	18.4%	16.6%	5.9%
Delays in Getting Medications All Ages	8.4%	-	11.3%	10.4%	6.3%

Note:

Target rate is Healthy People 2030 objective

Sources: Claritas and UCLA Center for Health Policy Research

## Section 5: Mortality

This section includes:

---

- Summary of premature mortality in Los Angeles County and SPA 3
- Profile of deaths in USC Arcadia Hospital Service Area
- Age-adjusted death rates in Los Angeles County benchmarked to Healthy People 2030 targets
- Age-adjusted death rates in Los Angeles County compared to California

Key used to summarize Los Angeles County experiences benchmarked to Healthy People 2030 targets:

	Target Met
	Target Not Met
	No Target Established

## Premature Mortality in Los Angeles County

Years of potential life lost before age 75 years (YPLL-75) is one of the commonly used public health measures to reflect the impact of premature mortality. In 2019 (the most recent year available), the top four leading causes of premature death in Los Angeles County were coronary heart disease followed by, drug overdose (unintentional), motor vehicle crashes and suicide. The ranking, and years of potential life lost before age 75 (YPLL-75) due to selected leading causes of death in Los Angeles County are summarized in the table on the next page. Of note, coronary heart disease was also the leading cause of premature death in the San Gabriel Valley Service Planning Area (SPA 3).

### **Years of Potential Life Lost for Top 10 Leading Causes of Premature Death, Ranked**

Los Angeles County

2019

Rank	Cause of Death	YPLL-75
1	Coronary Heart Disease	53,628
2	Drug Overdose (Unintentional)	39,420
3	Motor Vehicle Crash	26,001
4	Suicide	24,283
5	Diabetes Mellitus	21,901
6	Liver Disease/Cirrhosis	21,471
7	Homicide	20,669
8	Stroke	16,542
9	Breast Cancer	12,799
10	Colorectal Cancer	11,889

*Source: Los Angeles County Department of Public Health*

## Profile of Deaths in USC Arcadia Hospital Service Area

In 2023, there were 6,683 deaths in USCAH service area. Heart disease and cancer were the top two leading causes of death in the USCAH Service Area, accounting for 44 percent of all deaths. Of note, coronary heart disease is the leading cause of death in the USCAH Service Area as well as the leading cause of premature death in Service Planning Area 3 (2019). Other leading causes of death in the service area are summarized in the table below.

### Profile of Deaths, Ranked by Select Leading Causes of Death

USC Arcadia Hospital Service Area

2023

Select Leading Cause of Death	Number	Percent
Diseases of the Heart	1,565	23.4%
Cancer	1,384	20.7%
Alzheimer's disease	392	5.9%
Cerebrovascular diseases	348	5.2%
Diabetes	298	4.5%
Accidents (Unintentional Injuries)	228	3.4%
Influenza and Pneumonia	201	3.0%
Chronic Lower Respiratory Diseases	176	2.6%
Essential Hypertension and Hypertensive Renal Disease	81	1.2%
Chronic Liver Disease and Cirrhosis	51	0.8%
Nephritis, Nephrotic Syndrome and Nephrosis	36	0.5%
Suicide	11	0.2%
Homicide	-	0.0%
Parkinson's Disease	-	0.0%
All Other Causes	1,912	28.6%
<b>All Causes (Total)</b>	<b>6,683</b>	<b>100.0%</b>

Source: California Department of Public Health

# Coronary Heart Disease

**What's Being Measured** The age-adjusted death rate due to coronary heart disease.

**How the Measure is Defined** Coronary heart disease is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes I11 and I20-I25. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Heart disease is the leading cause of death in the United States. Coronary heart disease is the most common type of heart disease. Although the death rate from coronary heart disease has gone down in recent years, disparities by sex, race/ethnicity, and geographic location remain. Strategies to lower the risk of developing coronary heart disease, like controlling blood pressure, can help reduce deaths.

**Healthy People 2030 Objective** Reduce coronary heart disease deaths to 71.1 deaths per 100,000 population.

**USCAH Service Area (2023):** Coronary heart disease is leading cause of death

**Service Planning Area 3 – San Gabriel Valley (2019):** Coronary heart disease is leading cause of death

## **Los Angeles County**

**Measurement Period** 2021 – 2023

84.4 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Stroke

**What's Being Measured** The age-adjusted death rate due to stroke.

**How the Measure is Defined** Stroke is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes I60-I69. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Stroke is the fifth leading cause of death in the United States and a leading cause of long-term disability. Low-income populations, some racial/ethnic groups, and people who live in certain geographic regions are more likely to have a stroke and to die of a stroke. Interventions to lower people's risk for stroke by improving blood pressure, diet, and physical activity are critical for reducing stroke deaths. Raising awareness of stroke signs and symptoms and improving stroke management can also help reduce death and disability related to stroke.

**Healthy People 2030 Objective** Reduce stroke deaths to 33.4 deaths per 100,000 population.

**USC Arcadia Hospital Service Area (2023):** Stroke is 4<sup>th</sup> leading cause of death

## **Los Angeles County**

**Measurement Period** 2021 – 2023

30.3 deaths per 100,000 population

**Source of Data** California Department of Public Health

## Cancer (All Sites)

**What's Being Measured** The age-adjusted death rate due to cancer (all sites).

**How the Measure is Defined** Cancer (all sites) is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes C00-C97. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Cancer is the second leading cause of death in the United States. Strategies to help people quit smoking, eat healthy, and get more physical activity can help reduce deaths from different types of cancer. Vaccines, screening procedures, and new treatments can also help reduce cancer deaths.

**Healthy People 2030 Objective** Reduce cancer deaths to 122.7 deaths per 100,000 population.

**USCAH Service Area (2023):** Cancer is 2<sup>nd</sup> leading cause of death

### **Los Angeles County**

**Measurement Period** 2021 – 2023

112.1 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Lung Cancer

**What's Being Measured** The age-adjusted death rate due to lung cancer.

**How the Measure is Defined** Lung cancer is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes C33-C34. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Lung cancer is one of the most common and deadly cancers in the United States. Although lung cancer death rates have decreased in recent years, there are significant disparities by sex and race/ethnicity. Evidence shows that screening and interventions to prevent tobacco initiation and help people quit smoking can help lower the number of lung cancer deaths.

**Healthy People 2030 Objective** Reduce lung cancer deaths to 25.1 deaths per 100,000 population.

## **Los Angeles County**

**Measurement Period** 2021 – 2023

17.4 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Colorectal Cancer

**What's Being Measured** The age-adjusted death rate due to colorectal cancer.

**How the Measure is Defined** Colorectal cancer is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes C18-C21. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Colorectal cancer is one of the most common causes of cancer deaths in the United States. There are effective screening tools for finding colorectal cancer early, when people may be more likely to survive it. Strategies to increase use of recommended screenings and to help people get physical activity and eat healthy are key to reducing the colorectal cancer death rate.

**Healthy People 2030 Objective** Reduce colorectal cancer deaths to 8.9 deaths per 100,000 population.

## **Los Angeles County**

**Measurement Period** 2021 – 2023

11.3 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Prostate Cancer

**What's Being Measured** The age-adjusted death rate due to prostate cancer.

**How the Measure is Defined** Prostate cancer is defined as International Classification of Diseases, Tenth Revision (ICD-10) code C61. The rate is per 100,000 males and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Prostate cancer is the most commonly diagnosed cancer and the second leading cause of cancer deaths in American men. Death rates from prostate cancer are much higher in some groups than others. Research shows that closely monitoring prostate cancer is an effective way to reduce the prostate cancer death rate in men who are diagnosed early.

**Healthy People 2030 Objective** Reduce prostate cancer deaths to 16.9 deaths per 100,000 males.

## **Los Angeles County**

**Measurement Period** 2021 – 2023

16.0 per 100,000 males

**Source of Data** California Department of Public Health

# Female Breast Cancer

**What's Being Measured** The age-adjusted death rate due to breast cancer in females.

**How the Measure is Defined** Breast cancer is defined as International Classification of Diseases, Tenth Revision (ICD-10) code C50. The rate is per 100,000 females and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Breast cancer is one of the most common types of cancer in American women. Although breast cancer death rates have gone down in recent years, they remain higher in some racial/ethnic groups. Interventions to increase breast cancer screening, personalized treatments, and community-based cancer control efforts are important for reducing breast cancer deaths.

**Healthy People 2030 Objective** Reduce breast cancer deaths to 15.3 deaths per 100,000 females.

## **Los Angeles County**

**Measurement Period** 2021 – 2023

17.1 deaths per 100,000 females

**Source of Data** California Department of Public Health

# Chronic Obstructive Pulmonary Diseases

**What's Being Measured** The age-adjusted death rate due to chronic obstructive pulmonary diseases. Chronic obstructive pulmonary diseases are a group of diseases that cause airflow blockage and breathing-related problems and include emphysema, chronic bronchitis, and non-reversible asthma.

**How the Measure is Defined** Chronic obstructive pulmonary diseases are defined as International Classification of Diseases, Tenth Revision (ICD-10) codes J40-J44, and excludes asthma. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** COPD (chronic obstructive pulmonary disease) is a group of disease that make it hard to breath and can cause death. COPD is a major cause of disability and one of the leading causes of death in the United States. People who have COPD may not know it. Strategies to reduce deaths from COPD include reducing smoking and exposure to air pollution, teaching people with COPD how to manage it, and promoting tests that find it earlier.

**Healthy People 2030 Objective** None established

**USC Arcadia Hospital Service Area (2023):** COPD is 8<sup>th</sup> leading cause of death

## **Los Angeles County**

**Measurement Period** 2021 – 2023

20.1 deaths per 100,000 population (all ages)

**Source of Data** California Department of Public Health

# Influenza/Pneumonia

**What's Being Measured** The age-adjusted death rate due to influenza/pneumonia.

**How the Measure is Defined** Influenza/Pneumonia is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes J09-J18. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Older adults are more likely to get pneumonia and be hospitalized for it. Pneumonia is also a leading cause of death for older adults. Making sure older adults get pneumococcal vaccines and encouraging people to quit smoking can help reduce hospital admissions and deaths due to pneumonia.

**Healthy People 2030 Objective** None established.

**USC Arcadia Hospital Service Area (2023):** Influenza/Pneumonia is 7<sup>th</sup> leading cause of death

## **Los Angeles County**

**Measurement Period** 2021 – 2023

13.6 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Diabetes

**What's Being Measured** The age-adjusted death rate due to diabetes (as both an underlying cause of death and a contributing cause of death).

**How the Measure is Defined** Diabetes is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes E10-E14, as either an underlying or contributing cause of death. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2030 Objective** None established

**USC Arcadia Hospital Service Area (2023):** Diabetes is 5<sup>th</sup> leading cause of death

## **Los Angeles County**

**Measurement Period** 2021 – 2023

27.6 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Unintentional Injuries (All Types)

**What's Being Measured** The age-adjusted death rate due to all unintentional injuries.

**How the Measure is Defined** Unintentional injuries is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes V01-X59 and Y85-Y86. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Unintentional injuries from events like falls, drug overdoses, and motor vehicle crashes are a major cause of death in the United States. There are many effective strategies to reduce unintentional injuries, including interventions tailored to groups at high risk for certain types of injuries.

**Healthy People 2030 Objective** Reduce unintentional injury deaths to 43.2 deaths per 100,000 population.

**USC Arcadia Hospital Service Area (2023):** Unintentional Injuries is 6<sup>th</sup> leading cause of death

## **Los Angeles County**

**Measurement Period** 2021 – 2023

40.8 deaths per 100,000 population

**Source of Data** California Department of Public Health

## Motor Vehicle Crashes (Traffic-Related)

**What's Being Measured** The age-adjusted death rate due to motor vehicle crashes (traffic related).

**How the Measure is Defined** Motor vehicle crashes is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes V02-V04 (.1, .9), V09.2, V12-V14 (.3-.9), V19 (.4-.6), V20-V28 (.3-.9), V29-V79 (.4-.9), V80 (.3-.5), V81.1, V82.1, V83-V86 (.0-.3), V87 (.0-.8), and V89.2. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Motor vehicle crashes are the second leading cause of death from unintentional injuries in the United States. In addition, the rate of motor vehicle crash deaths in the United States is about twice the average rate of other high-income countries. Interventions aimed at increasing seat belt and infant car-seat use, reducing drunk driving and speed-related crashes, and protecting pedestrians can reduce deaths from motor vehicle crashes.

**Healthy People 2030 Objective** Reduce deaths due to motor vehicle crashes to 10.1 deaths per 100,000 population.

### **Los Angeles County**

**Measurement Period** 2021 – 2023

10.1 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Homicide

**What's Being Measured** The age-adjusted death rate due to homicide.

**How the Measure is Defined** Homicide is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes U01-U02, X85-Y09 and Y87.1. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Homicide is a major cause of death in the United States, with major disparities by age and race/ethnicity. Strategies to reduce gun violence, intimate partner violence, child abuse and neglect, and youth violence are critical for reducing homicides.

**Healthy People 2030 Objective** Reduce homicide deaths to 5.5 deaths per 100,000 population.

## **Los Angeles County**

**Measurement Period** 2021 – 2023

7.3 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Alzheimer's Disease

**What's Being Measured** The age-adjusted death rate due to Alzheimer's disease.

**How the Measure is Defined** Alzheimer's disease is defined as International Classification of Diseases, Tenth Revision (ICD-10) code G30. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2030 Objective** None established.

**USCAH Service Area (2023):** Alzheimer's Disease is 3<sup>rd</sup> leading cause of death

## **Los Angeles County**

**Measurement Period** 2021 – 2023

34.7 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Suicide

**What's Being Measured** The age-adjusted death rate due to suicide.

**How the Measure is Defined** Suicide is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes U03, X60-X84 and Y87.0. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Suicide is one of the leading causes of death nationwide, particularly among young people. In addition, suicide rates have increased in almost every state over the last two decades. Interventions to address behaviors (such as drug and alcohol misuse) that increase risk of suicide, may help reduce the suicide rate nationwide.

**Healthy People 2030 Objective** Reduce suicide deaths to 12.8 deaths per 100,000 population.

**USCAH Service Area (2023):** Suicide is 12<sup>th</sup> leading cause of death

## **Los Angeles County**

**Measurement Period** 2021 – 2023

8.0 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Chronic Liver Disease and Cirrhosis

**What's Being Measured** The age-adjusted death rate due to cirrhosis.

**How the Measure is Defined** Cirrhosis is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes K70, K73, and K74. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Chronic liver disease and cirrhosis are among the leading causes of death in the United States. Most cirrhosis deaths are related to alcohol use, with significant race/ethnic disparities in rates of cirrhosis deaths. Effective policies to reduce cirrhosis deaths include taxing and regulating alcohol sales and restricting alcohol advertising.

**Healthy People 2030 Objective** Reduce cirrhosis deaths to 10.9 deaths per 100,000 population.

**USC Arcadia Hospital Service Area (2023):** Chronic Liver Disease and Cirrhosis represent the 10<sup>th</sup> leading cause of death

## **Los Angeles County**

**Measurement Period** 2021 – 2023

14.7 deaths per 100,000 population

**Source of Data** California Department of Public Health

## Comparison of Mortality Rates in Los Angeles County to Healthy People 2030 Targets

When comparing age-adjusted death rates in Los Angeles County to Healthy People 2030 objectives, the County did not meet the objectives related to: coronary heart disease, colorectal cancer, female breast cancer, homicide, and chronic liver disease and cirrhosis deaths. The County and State experiences compared to Healthy People 2030 national objectives is summarized in the table below.

### Summary of Age-Adjusted Death Rates by Cause of Death

Los Angeles County compared to California and Healthy People 2030 Targets

Three-Year Average (2021 to 2023)

Indicator	Los Angeles County		California Rate	Target Rate
	Rate	Status		
Health Status				
Coronary Heart Disease	84.4	-	72.2	71.1
Stroke	30.3	+	35.7	33.4
Cancer (All Sites)	112.1	+	118.7	122.7
Lung	17.4	+	19.7	25.1
Colorectal	11.3	-	11.2	8.9
Prostate	16.0	+	17.6	16.9
Female Breast	17.1	-	17.1	15.3
Chronic Pulmonary Diseases	20.1	○	23.0	None
Influenza/Pneumonia	13.6	○	10.0	None
Diabetes	27.6	○	22.7	None
Unintentional Injuries (All Types)	40.8	+	49.8	43.2
Motor Vehicle Accidents	10.0	+	11.6	10.1
Homicide	7.3	-	5.8	5.5
Alzheimer's disease	34.7	○	32.3	None
Suicide	8.0	+	10.0	12.8
Chronic Liver Disease and Cirrhosis	14.7	-	14.4	10.9

Notes:

Target rate is Healthy People 2030 objective

Rates are per 100,000 persons and are standardized to the 2000 U.S. Standard Million population

Source: California Department of Public Health

## Section 6: Maternal and Infant Health

This section includes:

---

- Demographic overview of females age 15 to 44 years in USC Arcadia Hospital Service Area
- Summary of births in USC Arcadia Hospital Service Area
- Maternal and infant health outcomes in Los Angeles County compared to Healthy People 2030 targets
- Maternal and infant outcomes in Los Angeles County compared to California

Key used to summarize USC Arcadia Hospital Service Area experiences benchmarked to Healthy People 2030 Targets:

---

	Target Met
	Target Not Met
	No Target Established

Detailed information – at the ZIP Code level – can be found in:

---

- Appendix A: Service Area Description
- Appendix B: Age Group Detail
- Appendix C: Maternal Health

## Females Age 15 to 44 Years

**What's Being Measured** Females 15 to 44 years of age (childbearing age).

**How the Measure is Defined** The percentage of women age 15 to 44 years is calculated by dividing this age group of females by the total population (including males).

### **USCAH Service Area**

#### **Females Age 15 to 44 Years**

USC Arcadia Hospital Service Area

2025

<b>Female Age Group</b>	<b>Number of Persons</b>	<b>Percent of Total Population</b>
15 to 17 Years	14,294	1.7%
18 to 20 Years	15,488	1.9%
21 to 24 Years	20,623	2.5%
25 to 34 Years	53,417	6.4%
35 to 44 Years	55,192	6.6%
<b>Total Women 15 to 44 Years</b>	<b>159,014</b>	<b>19.0%</b>
Total Population	836,523	100.0%

*Note: Percentages rounded*

*Source: Claritas*

## Number of Births

**What's Being Measured** The number of live births.

**How the Measure is Defined** The three-year average is calculated by dividing the sum of the annual births by three.

### **USCAH Service Area**

#### **Number of Live Births**

USC Arcadia Hospital Service Area

*Three-Year Average (2021 to 2023)*

Year	Number of Births
2021	7,722
2022	7,638
2023	7,456
<b>Three-Year Average</b>	<b>7,605</b>

*Source: California Department of Public Health*

## **Births with Adequate/Adequate Plus Prenatal Care**

**What's Being Measured** The rate of live births to mothers with adequate/adequate plus prenatal care.

**How the Measure is Defined** Prenatal care refers to pregnancy-related health care. Prenatal care services typically include screening and treatment of medical conditions for both mothers and babies and interventions for behavioral risk factors associated with poor birth outcomes. Adequacy of prenatal care assesses both the timing of the first prenatal care visit and the frequency of visits throughout the entire pregnancy adjusted for the infant's gestational age. The rate is expressed per 100 live births.

**Why the Measurement is Helpful** Prenatal care is most effective when it starts early and continues throughout pregnancy. It can help prevent and address health problems in mothers and babies. Interventions to increase access to health care can help more women get the prenatal care they need.

**Healthy People 2030 Objective** At least 80.5% of mothers receive adequate/adequate plus prenatal care

### **Los Angeles County**

**Measurement Period** 2021 to 2023 (Three-Year Average)

75.7% to mothers with adequate/adequate plus prenatal care

**Source of Data** California Department of Public Health

# Infant Birth Weight

**What's Being Measured** The rate of low-birth-weight infants.

**How the Measure is Defined** Low birth weight is defined as live births weighing less than 2,500 grams (5.5 pounds). Normal birth weight is defined as 2,500 grams or more. The rates are expressed per 100 live births and exclude births with unknown birth weight.

**Why the Measurement is Helpful** Low birth weight is associated with long-term disabilities, such as cerebral palsy, autism, mental retardation, vision and hearing impairments and other developmental disabilities and is the risk factor most closely associated with neonatal death. Smoking accounts for 20 to 30 percent of all low-birth-weight infants in the United States. The effect of smoking on low-birth-weight rates appears to be attributable to intrauterine growth retardation rather than to pre-term delivery. Despite the low proportion of pregnancies resulting in low-birth-weight infants, expenditures for the care of low-birth-weight infants total more than half of the costs incurred for all newborns.

**Healthy People 2030 Objective** Not established.

## **Los Angeles County**

**Measurement Period** 2021 to 2023 (Three-Year Average)

Target Met

Target Not Met

7.7% of infants were low birth weight

**Source of Data** California Department of Public Health

# Infant Mortality

**What's Being Measured** The rate of infant deaths.

**How the Measure is Defined** Infant mortality is the number of deaths among infants under one year of age. The rate is expressed per 1,000 live births.

**Why the Measurement is Helpful** Every year in the United States, thousands of infants die from causes like pre-term birth, low birth weight, and sudden infant death syndrome. Although the rate of infant deaths has fallen over the past decade, there are disparities by race/ethnicity, income, and geographic location. Equitable, high-quality care for mothers and babies, plus community-based interventions can help reduce the rate of infant deaths.

**Healthy People 2030 Objective** Reduce the rate of all infant deaths to no more than 5.0 per 1,000 live births.

## **Los Angeles County**

**Measurement Period** 2020 to 2022 (Three-Year Average)

3.6 infant deaths per 1,000 live births

**Source of Data** California Department of Public Health

## Summary of Maternal and Infant Health Indicators and Comparison to Healthy People 2030 Targets

Note: Findings are based on live births that occurred in the service area during 2021 to 2023, three-year averages of pregnancy and birth outcomes that occurred among residents of Los Angeles County during 2021 to 2023, and three-year averages of infant mortality among infants during 2020 to 2022

During the three-year period from 2021 through 2023, there was an average of 7,605 births a year in the USCAH Service Area.

### Number of Live Births

USC Arcadia Hospital Service Area

Three-Year Average (2021 to 2023)

Year	Number of Births
2021	7,722
2022	7,638
2023	7,456
<b>Three-Year Average</b>	<b>7,605</b>

Source: California Department of Public Health

When comparing maternal and infant health indicators in Los Angeles County to Healthy People 2030 objectives, the county did not meet the objective for adequacy of prenatal care. The county experience compared to Healthy People 2030 national objectives is summarized in the table below.

### Summary of Maternal and Infant Health Indicators

Los Angeles County, California and Healthy People 2030 Targets

2021 to 2023 and 2020 to 2022

Indicator	Los Angeles County		California Rate	Target Rate
	Rate	Status		
Health Access and Pregnancy Outcome (2021 to 2023)				
Adequate/Adequate Plus Prenatal Care	75.7%	-	72.3%	80.5%
Low Birth Weight Infants	7.7%	○	7.4%	None
Infant Mortality (2020 to 2022)				
Infant Mortality	3.6	+	3.7	5.0

Note: Target rate is Healthy People 2030 objective

Source: California Department of Public Health

# Section 7: Child and Adolescent Health

This section includes:

- Demographic overview of children and youth age 0 to 20 years in USCAH Service Area
- Summary of students enrolled in free or reduced fee meals
- Summary of four-year adjusted graduation rates among high school students attending in schools in USCAH Service Area
- Findings from the 2024 California Health Interview Survey for SPA 3 compared to Healthy People 2030 targets
- Summary of child abuse and neglect in Los Angeles County
- Child and adolescent health indicators in SPA 3 compared to Los Angeles County and California

Key used to summarize SPA 3 experiences benchmarked to Healthy People 2030 Targets:

	Target Met
	Target Not Met
	Result is Statistically Unstable

Detailed information – at the ZIP Code level – can be found in:

- Appendix C: Age Group Detail

## Children and Youth Age 0 to 20 Years

**What's Being Measured** Children and youth under age 21 years.

**How the Measure is Defined** The percentage of the population 0 to 20 years is calculated by dividing this age group by the total population.

### **USCAH Service Area**

#### **Population Age 0 to 20 Years**

USC Arcadia Hospital Service Area

2025

<b>Age Group</b>	<b>Number of Persons</b>	<b>Percent of Total Population</b>
0 to 4 Years	40,152	4.8%
5 to 9 Years	42,346	5.1%
10 to 14 Years	46,620	5.6%
15 to 17 Years	29,525	3.5%
18 to 20 Years	31,576	3.8%
<b>Total 0 to 20 Years</b>	<b>190,219</b>	<b>22.7%</b>
Total Population	836,523	—

*Note: Percentages rounded*

*Source: Claritas*

# Medical Insurance

**What's Being Measured** Population age 0 to 17 years with medical insurance the entire past year or only part of the past year.

**How the Measure is Defined** The percentage of persons with health insurance includes persons with any type of public or private health insurance. Insured persons include those with health insurance for all or part of the year. Results are from the 2024 California Health Interview Survey.

**Why the Measurement is Helpful** About 1 in 10 people in the United States have no health insurance. People without health insurance are less likely to have a primary care provider and they may not be able to afford the health services and medications they need. Strategies to increase insurance coverage rates are critical for making sure more people receive needed health services, like preventive care and treatment for chronic illnesses.

**Healthy People 2030 Objective** Increase the proportion of persons under age 65 years with medical insurance to 92.4%.

## **SPA 3 (San Gabriel Valley)**

**Measurement Period** 2024

100% of children age 0 to 17 years have medical insurance

**Source of Data** UCLA Center for Health Policy Research

# Source of Ongoing Care

**What's Being Measured** Persons age 0 to 17 years with a specific source of ongoing care

**How the Measure is Defined** Specific sources of ongoing care may include any of the following: doctor's office/HMO/Kaiser, community, government or hospital clinic, emergency room/urgent care, health center facility, or some other place. Results are from the 2024 California Health Interview Survey.

**Why the Measurement is Helpful** Access to care depends in part on access to an ongoing source of care. People with a usual source of healthcare are more likely than those without a usual source of care to receive a variety of preventive health care services. An estimated 15 percent of adults in the US lack a usual source of care; an estimated 7 percent of children age 17 years and under lack a specific source of ongoing care. Uninsured persons under age 65 years are more likely to lack a usual source of care than those who have either public or private health insurance.

**Healthy People 2030 Objective** Increase the proportion of persons age 0 to 17 years who have a specific source of ongoing care to 95.1%

Note: The Healthy People 2030 objective excludes emergency rooms as a usual source of care.

## **SPA 3 (San Gabriel Valley)**

**Measurement Period** 2024

82% of children age 0 to 17 years have a specific source of ongoing care

**Source of Data** UCLA Center for Health Policy Research

# Obese Adolescents

**What's Being Measured** The proportion of persons age 12 to 17 years who are obese.

**How the Measure is Defined** Obese adolescents are defined as those who have a Body Mass Index (or BMI) at or above the gender- and age-specific 95<sup>th</sup> percentile of BMI based on the revised CDC Growth Charts for the United States. Results are based on self-reported data by adolescents and are from the 2024 California Health Interview Survey.

**Why the Measurement is Helpful** Many children and adolescents in the United States are obese. Obesity is linked to a higher risk for diseases and conditions like high blood pressure, high cholesterol, diabetes, asthma, anxiety, and depression. In addition, children who are obese are more likely to be bullied and have obesity as adults. Evidence suggests that intensive behavioral programs that use more than one strategy are an effective way to reduce childhood obesity. Policy and school curriculum changes that make it easier for children and adolescents to eat healthy and get physical activity can also help reduce obesity.

**Healthy People 2030 Objective** Reduce the proportion of adolescents age 12 to 17 years who are obese to 15.5%.

## **SPA 3 (San Gabriel Valley)**

**Measurement Period** 2024

12.2% of adolescents age 12 to 17 years are obese

**Source of Data** UCLA Center for Health Policy Research

# Tobacco Use

**What's Being Measured** The proportion of persons age 14 to 17 years who reported having smoked one or more cigarettes within the past 30 days.

**How the Measure is Defined** Teens were asked if they smoked cigarettes in the past 30 days. Results are from the 2024 California Health Interview Survey.

**Why the Measurement is Helpful** Tobacco use is the leading preventable cause of death in the United States. Tobacco use is a major risk factor for heart disease, stroke, emphysema and cancers of the lung, pharynx, oral cavity, esophagus, pancreas and bladder. Some groups are more likely to use tobacco than others. Population level interventions to reduce tobacco use include price increases, mass media campaigns, and smoke-free policies.

**Healthy People 2030 Objective** Reduce cigarette smoking among adolescents (in grades 9 through 12) to 3.4% or less.

## **SPA 3 (San Gabriel Valley)**

**Measurement Period** 2024

0% of adolescents age 14 to 17 years smoke cigarettes

**Source of Data** UCLA Center for Health Policy Research

# Binge Drinking

**What's Being Measured** The proportion of persons age 12 to 17 years who reported binge drinking in the past 30 days.

**How the Measure is Defined** Teens were asked the number of alcoholic beverages they consumed at the same time or within a period of two hours during the past month. Binge drinking is defined as drinking 5 or more alcoholic beverages for males or 4 or more alcoholic beverages for females at the same time or within two hours of each other during the past 30 days. Results are from the 2024 California Health Interview Survey.

**Why the Measurement is Helpful** Binge drinking is associated with profound social harm and economic costs as well as increased disease burden. Binge drinking is more common in males, during adolescence and young adulthood. Most binge drinkers are not familiar with the risks associated with binge drinking. Heavy regular binge drinking is associated with adverse effects on neurologic, cardiac, gastrointestinal, hematologic, immune, musculoskeletal organ systems as well as increasing the risk of alcohol induced psychiatric disorders. A US-based review of the literature found that up to one third of adolescents binge drink, with six percent reaching the threshold of having an alcohol-related substance abuse disorder. Binge drinking during adolescence is associated with traffic accidents and other types of accidents, violent behavior, and suicide. The more often a child or adolescent binge drinks and the younger they are the more likely that they will develop an alcohol use disorder, including alcoholism. A large number of adolescents who binge drink also consume other psychotropic substances.

**Healthy People 2030 Objective** Reduce the proportion of adolescents age 12 to 17 years who reported they engaged in binge drinking during the past month to 8.6%

## **SPA 3 (San Gabriel Valley)**

**Measurement Period** 2024

0.8% of adolescents age 12 to 17 years engaged in binge drinking

**Source of Data** UCLA Center for Health Policy Research

# Child Abuse and Neglect

**What's Being Measured** Substantiated cases of child abuse and neglect (child maltreatment) among children age 0 to 17 years.

**How the Measure is Defined** The rate of substantiated child abuse and neglect incidents is determined by the number of child abuse and neglect reports that warrant an in-person investigation and are then substantiated. The rate is expressed per 1,000 children in the population age 0 to 17 years. The source of the data is the Center for Social Sciences Research at University of California at Berkeley. The data covers a two-year average from January 1, 2023 to December 31, 2024.

**Why the Measurement is Helpful** Child abuse and neglect are found in families across the social spectrum, and cases are becoming more complex, with more entrenched risk factors. Social isolation, family disorganization, financial stress, and poverty can trigger child abuse. Abused children often experience higher rates of suicide, depression, substance abuse, difficulties in school, and other behavioral problems in later life. Abused children are also at greater risk of becoming delinquents, mistreating their own children, and becoming involved in violent partner relationships as teens and adults.

**Healthy People 2030 Objective** Reduce the incidence of child maltreatment to no more than 8.7 per 1,000 children aged 18 and younger.

## **Los Angeles County**

**Measurement Period** Two-Year Average 2023-2024

6.5 cases of child abuse per 1,000 children

**Source of Data** Center for Social Sciences Research at University of California at Berkeley

# Summary of Child and Adolescent Health and Comparison to Healthy People 2030 Targets

Note: Findings are based on 2024 California Health Interview Survey for SPA 3

When comparing child and adolescent health indicators in the SPA to Healthy People 2030 objectives, the SPA results were statistically reliable only for health access: usual source of care. For individuals under age 18 years, the SPA did not meet the Healthy People 2030 objective. The SPA experience compared to Healthy People 2030 national objectives is summarized in the table below.

## Summary of Child and Adolescent Health Indicators

SPA 3 Compared to Los Angeles County, California and Healthy People 2030 Targets  
2024

Indicator	SPA 3		County Rate	California Rate	Target Rate
	Rate	Status			
Health Access					
Insured All or Part of Year Age 0 to 17 Years	100%	*	100%	99%	92.4%
Usual Source of Ongoing Care Age 0 to 17 Years	82%	-	88%	88%	95.1%
Health Behaviors					
Obese Age 12 to 17 Years	12.2%	*	17.3%	15.2%	15.5%
Currently Smoke Cigarettes Age 14 to 17 Years	0%	*	*.1%	*1.1%	3.4%
Binge Drinking in Past Month Age 12 to 17 Years	0.8%	*	*5.7%	4.5%	6.0%

Notes:

Asterisk indicates result is statistically unstable

Target rate is Healthy People 2030 objective

# Medical Insurance

**What's Being Measured** Persons age 18 to 64 years with health insurance the entire past year or only part of the past year.

**How the Measure is Defined** The percentage of persons with health insurance includes persons with any type of public or private health insurance. Insured persons include those with health insurance for all or part of the year. Results are from the 2024 California Health Interview Survey.

**Why the Measurement is Helpful** About 1 in 10 people in the United States have no health insurance. People without health insurance are less likely to have a primary care provider and they may not be able to afford the health services and medications they need. Strategies to increase insurance coverage rates are critical for enabling people receive needed health services, like preventive care and treatment for chronic illnesses.

**Healthy People 2030 Objective** Increase the proportion of persons under age 65 years with medical insurance to 92.4%.

## **SPA 3 (San Gabriel Valley)**

### **Measurement Period** 2024

95.4% of adults age 18 to 64 years have medical insurance

**Source of Data** UCLA Center for Health Policy Research

# Source of Ongoing Care

**What's Being Measured** Persons age 18 to 64 years with a specific source of ongoing care

**How the Measure is Defined** Specific sources of ongoing care may include any of the following: doctor's office/HMO/Kaiser, community, government or hospital clinic, emergency room/urgent care, health center facility, or some other place. Results are from the 2024 California Health Interview Survey.

**Why the Measurement is Helpful** Access to care depends in part on access to an ongoing source of care. People with a usual source of health care are more likely than those without a usual source of care to receive a variety of preventive health services. An estimated 15 percent of adults in the US lack a usual source of care; an estimated 7 percent of children age 17 years and under lack a specific source of ongoing care. Uninsured persons under age 65 years are more likely to lack a usual source of care than those who have either public or private health insurance.

**Healthy People 2030 Objective** Increase the proportion of persons of all ages who report that they have a usual primary care provider (e.g., doctor's office, health center or other place) to 95.1%

Note: The Healthy People 2030 objective excludes emergency rooms as a usual source of care.

## **SPA 3 (San Gabriel Valley)**

**Measurement Period** 2024

82.8% of adults age 18 to 64 years have a specific source of ongoing care

**Source of Data** UCLA Center for Health Policy Research

# Obesity

**What's Being Measured** The proportion of population age 20 to 64 years who are obese.

**How the Measure is Defined** Adults were asked their height and weight. These measures were used to calculate a BMI (or Body Mass Index). BMI is calculated by dividing weight (in kilograms) by height squared (in meters). A BMI from 0 to 18.49 is described as underweight, a BMI from 18.5 to 24.99 is described as normal, healthy weight; a BMI from 25.0 to 29.99 is described as overweight, and a BMI of 30.0 or higher is described as obese. Results are from the 2024 California Health Interview Survey.

**Why the Measurement is Helpful** About 2 in 5 adults and 1 in 5 children and adolescents in the United States are obese, and many others are overweight. Obesity is linked to many serious health problems, including Type 2 diabetes, heart disease, stroke, and some types of cancer. Some racial/ethnic groups are more likely to be obese, which increases the risk of chronic diseases.

## **Healthy People 2030 Objective**

Reduce the proportion of adults age 20 years and older who are obese to 36.0% (BMI of 30 or more). This objective is age-adjusted to the Year 2000 million population and is not comparable to the results of the 2024 California Health Interview Survey.

## **SPA 3 (San Gabriel Valley)**

**Measurement Period** 2024

24.8% of adults age 20 to 64 years are obese

**Source of Data** UCLA Center for Health Policy Research

# Tobacco Use

**What's Being Measured** The proportion of persons age 18 to 64 years who currently smoke cigarettes.

**How the Measure is Defined** Adults were asked if they smoked cigarettes in the past 30 days. Results are from the 2024 California Health Interview Survey.

**Why the Measurement is Helpful** Tobacco use is the leading preventable cause of death in the United States. Tobacco use is a major risk factor for heart disease, stroke, emphysema and cancers of the lung, pharynx, oral cavity, esophagus, pancreas and bladder. Some groups are more likely to use tobacco than others. Population level interventions to reduce tobacco use include price increases, mass media campaigns, and smoke-free policies.

**Healthy People 2030 Objective** Reduce cigarette smoking among adults age 18 years and older to 12% or less.

## **SPA 3 (San Gabriel Valley)**

**Measurement Period** 2024

3.9% of adults currently smoke cigarettes

**Source of Data** UCLA Center for Health Policy Research

# Binge Drinking in Past Month

**What's Being Measured** The proportion of population age 18 to 64 years who engaged in binge drinking in the past month.

**How the Measure is Defined** Adults were asked if engaged in binge drinking in the past 30 days. Binge drinking is defined differently for both males and females. For males, binge drinkers are those that have had five or more drinks on at least one occasion in the past month. For females, binge drinkers are those that have had four or more drinks on at least one occasion in the past month. Results are from the 2024 California Health Interview Survey.

**Why the Measurement is Helpful** Binge drinking is a serious but preventable health problem. Binge drinking is the most common, costly, and deadly pattern of excessive alcohol use in the United States. Most people who binge drink do not have a severe alcohol use disorder. However, binge drinking is a harmful risk behavior associated with serious injuries and multiple diseases. It is also associated with an increased risk of alcohol use disorder.

**Healthy People 2030 Objective** Reduce binge drinking among adults age 18 years and older to 22.7% or less.

## **SPA 3 (San Gabriel Valley)**

**Measurement Period** 2024

13.2% of adults engaged in binge drinking in the past month

**Source of Data** UCLA Center for Health Policy Research

# Summary of Adult Health and Comparison to Healthy People 2030 Targets

Note: Findings are based on 2024 California Health Interview Survey for SPA 3

When comparing adult health indicators in the SPA to Healthy People 2030 objectives, the SPA did not meet the objective related to health access for: usual source of ongoing care. The SPA experience compared to Healthy People 2030 national objectives is summarized in the following table.

## Summary of Adult Health Indicators

SPA 3 Compared to Los Angeles County, California and Healthy People 2030 Targets  
2024

Indicator	SPA 3		County Rate	California Rate	Target Rate
	Rate	Status			
Health Access					
Insured All or Part of Year Age 18 to 64 Years	95.4%	+	93.3%	94.4%	92.4%
Usual Source of Ongoing Care Age 18 to 64 Years	82.8%	-	79.5%	82.2%	95.1%
Health Behaviors					
Obese Age 20 to 64 Years	24.8%	○	27.5%	29.1%	None
Currently Smoke Cigarettes Age 18 to 64 Years	3.9%	*	5.9%	5.9%	6.1%
Engaged in Binge Drinking in Past Month Age 18 to 64 Years	13.2%	+	17.5%	18.2%	22.7%

Notes:

\* Result is statistically unstable

Target rate is Healthy People 2030 objective

## Source of Ongoing Care

**What's Being Measured** Persons age 65 years and older with a specific source of ongoing care

**How the Measure is Defined** Specific sources of ongoing care may include any of the following: doctor's office/HMO/Kaiser, community, government or hospital clinic, emergency room/urgent care, health center facility, or some other place. Results are from the 2024 California Health Interview Survey.

**Why the Measurement is Helpful** Access to care depends in part on access to an ongoing source of care. People with a usual source of health care are more likely than those without a usual source of care to receive a variety of preventive health services. An estimated 15 percent of adults in the US lack a usual source of care.

**Healthy People 2030 Objective** Increase the proportion of persons age 65 years and older who have a specific source of ongoing care to 95.1%

Note: The Healthy People 2030 objective excludes emergency rooms as a usual source of care.

### **SPA 3 (San Gabriel Valley)**

**Measurement Period** 2024

94.7% of seniors age 65 years and older have a specific source of ongoing care

**Source of Data** UCLA Center for Health Policy Research

# Obesity

**What's Being Measured** The proportion of seniors age 65 years and older who are at a normal, healthy weight and those that are obese.

**How the Measure is Defined** Adults were asked their height and weight. These measures were used to calculate a BMI (or Body Mass Index). BMI is calculated by dividing weight (in kilograms) by height squared (in meters). A BMI from 0 to 18.49 is described as underweight, a BMI from 18.5 to 24.99 is described as normal, healthy weight; a BMI from 25.0 to 29.99 is described as overweight, and a BMI of 30.0 or higher is described as obese. Results are from the 2024 California Health Interview Survey.

**Why the Measurement is Helpful** About 2 in 5 adults and 1 in 5 children and adolescents in the United States are obese, and many others are overweight. Obesity is linked to many serious health problems, including Type 2 diabetes, heart disease, stroke, and some types of cancer. Some racial/ethnic groups are more likely to be obese, which increases the risk of chronic diseases.

## **Healthy People 2030 Objective**

Reduce the proportion of adults age 20 years and older who are obese to 36.0% (BMI of 30 or more). This objective is age-adjusted to the Year 2000 million population and is not comparable to the results of the 2024 California Health Interview Survey.

## **SPA 3 (San Gabriel Valley)**

**Measurement Period** 2024

24.9% of seniors age 65 years and older are obese

**Source of Data** UCLA Center for Health Policy Research

# Tobacco Use

**What's Being Measured** The proportion of adults age 65 years and older who currently smoke cigarettes.

**How the Measure is Defined** Adults were asked if they smoked cigarettes in the past 30 days. Results are from the 2024 California Health Interview Survey.

**Why the Measurement is Helpful** Tobacco use is the leading preventable cause of death in the United States. Tobacco use is a major risk factor for heart disease, stroke, emphysema and cancers of the lung, pharynx, oral cavity, esophagus, pancreas and bladder. Some groups are more likely to use tobacco than others. Population level interventions to reduce tobacco use include price increases, mass media campaigns, and smoke-free policies.

**Healthy People 2030 Objective** Reduce cigarette smoking among adults age 18 years and older to 6.1% or less.

## **SPA 3 (San Gabriel Valley)**

**Measurement Period** 2024

3.1% of seniors age 65 years and older smoke cigarettes

**Source of Data** UCLA Center for Health Policy Research

# Summary of Senior Health Indicators and Comparison to Healthy People 2030 Targets

Note: Findings are based on 2024 California Health Interview Survey for SPA 3

When comparing senior health indicators in the SPA to Healthy People 2030 objectives, the SPA met the objective related to currently smoke cigarettes. The SPA experience compared to Healthy People 2030 national objectives is summarized in the table below.

## Summary of Senior Health Indicators

SPA 3 Compared to Los Angeles County, California and Healthy People 20300 Targets

2024

Indicator	SPA 3		County Rate	California Rate	Target Rate
	Rate	Status			
Health Access					
Usual Source of Ongoing Care Age 65 Years and Older	94.7%	*	94.1%	93.7%	95.1%
Health Behaviors					
Obese Age 65 Years and Older	24.9%	○	23.8%	23.2%	None
Currently Smoke Cigarettes Age 65 Years and Older	3.1%	+	3.4%	3.8%	6.1%

## Section 10: Community Consultation

This section includes:

---

- Overview of the community consultation process
- Analysis of the community consultation

Additional information regarding participants in the community consultation can be found in:

---

- Appendix D: Community Consultation Participants

# Overview

Prior to conducting the interviews, leadership from USC Arcadia Hospital and the project consultant participated with other member hospitals in the Health Consortium of the Greater San Gabriel Valley to develop a workplan related to gathering input from community stakeholders. In addition, the project consultant reviewed the findings from community input from five participating hospitals in the Health Consortium of the Greater San Gabriel Valley to identify key themes.<sup>1</sup> These themes included: access to care, mental health, substance abuse, housing and homelessness, overweight and obesity prevention, community safety and violence prevention, well-being of older adults, and oral health.

USC Arcadia Hospital leadership and staff identified twenty contacts for telephone interviews. Individuals selected for interviews represented city and county departments, non-profit community-based health and social organizations serving population groups such as the poor, seniors, and Chinese and Latino residents. The project consultant recommended that the hospital use the same open-ended questions as applied in prior community health needs assessments, so as to obtain respondents opinions of important health issues, without favoring prompted answers. Once an individual confirmed interest in participation, a letter – describing the purpose of the phone survey and the questions to be posed in the upcoming telephone interview – was distributed electronically (via email).

Those participating in the community consultation were asked to respond to the following questions:

1. In your opinion, what are the top three health issues in the San Gabriel Valley?
2. Are there specific neighborhood areas or populations affected by these health issues?
3. What specific actions should be undertaken to address these health issues?
4. What specific actions or collaborations could USC Arcadia Hospital undertake to address these community health issues?

Following completion of the interviews, responses were analyzed and summarized based on general concepts and common themes.

---

<sup>1</sup> 2025 Community Health Needs Assessments posted online were reviewed for City of Hope Duarte, Emanate Health, Huntington Health, Kaiser Foundation Hospital – Baldwin Park, and Pomona Valley Hospital Medical Center.

## **Community's Top Health Issues**

Note: Findings are based on 23 phone interviews. Of the total, 16 interviews were conducted by the project consultant in October and November 2025 and seven were shared interviews conducted by a member of the Greater San Gabriel Valley Health Consortium.

The following were identified as the community's top health issues (based on frequency of overall mention):

- Chronic disease
- Mental health and substance abuse
- Aging and elder care
- Access to health services
- Social and environmental challenges

Each issue is discussed on the following pages.

## **Chronic Disease**

Respondents participating in the community consultation identified various health conditions, generally affecting older adults. Some of those interviewed also mentioned the importance of healthy lifestyles for school-aged students as a means of preventing and reducing obesity and diabetes.

The following health conditions were specifically mentioned as prevalent and important by those participating in the interviews:

- Diabetes
- High blood pressure
- High cholesterol
- Heart disease
- Congestive heart failure
- Stroke
- Cancer
- Obesity and overweight

### **Neighborhood areas and populations affected by chronic diseases**

Among the specific population groups mentioned were:

- Seniors (primarily)
- Adults and youth who are at risk for obesity and overweight
- Individuals who do not speak or read English, including Chinese speaking (Mandarin and Cantonese) and Spanish speaking adults
- Asians and Hispanics
- Poor and lower income adults
- Individuals with limited access to healthy foods and fresh vegetables
- Individuals with poor eating habits and lack of exercise
- Neighborhoods in Duarte, El Monte, South El Monte, Monrovia, and Azusa

### **Specific actions to address chronic diseases**

- Health education such as seminars, workshops, webinars – by medical professions, including physicians, dietitians, and pharmacists
- In-language pamphlets for Chinese and Spanish speaking persons
- Health fairs and health screenings – during the daytime on weekends, tied to city and/or community events
- Regular monthly classes on diabetes and weight control and how to prevent diseases and maintain health

- Support services, including case management and patient navigation
- Support groups for cancer patients
- Partnerships with community organizations who provide assistance with insurance choices and signups as well as locating and navigating resources
- Partnerships with schools and school districts
- Mobile clinics and screenings

#### Specific actions or opportunities for USC Arcadia Hospital to address chronic diseases

Many of those participating in the community consultation recognized and commended USC Arcadia Hospital for its ongoing collaborative activities in the community as well as efforts to notify individuals of upcoming programs. Specific actions mentioned include the following:

- “Lunch and Learn” programs in collaboration with other organizations, such as senior and recreation centers
- Attendance at health fairs and community events providing health information and education, screenings, and flu shots
- Coordination with schools and school districts, city governments, Santa Anita Park, the Arboretum, and Chambers of Commerce
- Work with schools to introduce students to health care professions
- Increase Chinese-speaking medical staff and nurses at the hospital

## **Mental Health and Substance Abuse**

A spectrum of ages, beginning with youth, is associated with mental health and substance abuse issues.

- Youth often face challenges associated with bullying, online AI fakes, academic pressures, distance learning, and suicide as well as reported increases in substance abuse and addiction.
- Newer adult Asian immigrants to San Gabriel Valley communities need some mental health support for anxiety, depression, stress, marital problems, and bereavement. Many are alone, trying to earn a living and without a social network. Some are hesitant to seek care and also have difficulty finding mental health professionals who are understanding of their circumstances and culture.
- Unhoused and homeless individuals often have mental health and substance abuse issues.
- It is important to prevent older adults on fixed incomes from falling into homelessness.
- Substance abuse (such as fentanyl) and addiction affects many in the San Gabriel Valley, including youth. Particularly challenging is there is no “one size fits all approach.”
- Some of those interviewed reported that there is underdiagnosed and untreated mental health.
- Some adults are unable to access mental health services, as many providers only accept cash or private insurance; Medi-Cal reportedly has long wait times to see providers.
- In contrast, some individuals with mental health needs are cycling through inpatient facilities, outpatient clinics and medications.

### **Neighborhood areas or populations affected by mental health and substance abuse**

- Both youth and adults
- Homeless persons
- Asian immigrants to the San Gabriel Valley

### **Specific actions to address mental health and substance abuse**

Among the proposed community actions for youth are the following: social workers for youth at community non-profits, therapy and homework assistance.

A number of activities – both private and public – were proposed to address mental health and substance abuse ranging from:

- Direct services – such as early clinical intervention services, additional addiction rehabilitation centers, mobile mental health services, Los Angeles County Mental Health services, home visitation programs, psychiatrists in hospitals, and use of telehealth
- Increased funding

- Stronger advocacy

Specific actions or collaborations for USC Arcadia Hospital to address mental health and substance abuse

Those participating in the community consultation suggested that the hospital continue to promote health education and mental wellness. To assist youth, a volunteer program was suggested where school-age students make a commitment to offer their time assisting hospital patients.

## **Aging and Elderly Care**

Respondents participating in the community consultation identified the following health concerns for the elderly:

- Dementia
- Alzheimer's disease
- Parkinson's Disease
- Loss of balance and associated trips and falls
- Individuals who do not have caregivers or aides

### **Neighborhood areas or populations affected by aging and elderly care**

According to some of those participating in the community consultation, seniors are most commonly affected by the noted issues. In addition, many seniors do not have access to transportation and are further limited in their ability to participate in community programs. Some respondents also mentioned the stress on caregivers and aides, and the need for respite.

### **Specific actions to address aging and elderly care**

Those participating in the community consultation mentioned culturally and linguistically appropriate education, inviting both seniors and their families to events. Additional affordable services are needed for low-income seniors.

### **Specific actions or collaborations for USC Arcadia Hospital to address aging and elderly care**

Suggestions for USC Arcadia Hospital include doctors and nurses to provide educational events for seniors, related to dementia and other health topics.

## **Access to Health Care Services**

Some of those participating in the community consultation identified a number of challenges related to access to health services, including:

- Individuals who do not have timely access to medical care – due to lack of transportation, lack of insurance, or lack of a medical home
- Use hospital emergency rooms or urgent care for basic health services
- Limited availability of medical providers outside of routine office days and hours
- Communication problems due to lack of bilingual providers for non-English proficient seniors
- Transportation for older people, particularly those with a disability, who no longer drive or use public buses and vans like Access, and/or cannot afford ridesharing services

### **Neighborhood areas or populations affected by access to health services**

Many population groups were identified, including:

- Low-income families
- Immigrants
- Undocumented persons
- Non-English speakers
- Asians and Latinos
- Persons who have difficulty navigating the health system and selecting an insurance product accepted by local physicians and hospitals
- Individuals who need transportation
- Middle-class blue-collar workers
- East San Gabriel Valley neighborhoods.

### **Specific actions to address access to health services**

- Collaborative actions suggested by some of those participating in the community consultation included working and partnering with schools, cities and local governments, non-government organizations, and funding organizations.
- Raising awareness of the importance of health checkups
- Offering affordable health care services and/or providing assistance to identify affordable resources

### Specific actions or collaborations for USC Arcadia Hospital to address access to health services

Among the specific suggestions offered:

- Continue to increase community outreach efforts
- Collaborate with community organizations to provide more health education classes and webinars by physicians
- Work with area schools and churches
- Provide information to the community on emergency preparedness
- Hold health fairs in more diverse geographic locations

## **Social and Environmental Challenges**

Those participating in the community consultation identified a number of social and environmental challenges, including:

- Many respondents mentioned housing affordability, housing instability, unhoused persons, and homelessness in general. They noted that the number and type of individuals who are homeless has been changing over time, moving from primarily single adult males to now include women and children as well as older adults on fixed incomes who face cost of living increases to Social Security that fail to keep pace with the cost of housing.
- Chronic illnesses, mental health and substance use, and hepatitis are rising among the homeless population.
- Transportation and long commutes
- Food/nutrition security
- Eaton fires and related water and air pollution
- Climate and environment
- Community safety
- Education

### **Neighborhood areas or populations affected by social and environmental challenges**

Adults, older adults and seniors are most affected by housing instability and homelessness as well as lack of affordable transportation solutions.

### **Specific actions to address social and environmental challenges**

- Continue Los Angeles Homeless Services Authority (LAHSA) pilot program with SGV area hospitals, using a portal for social workers and case managers to establish referrals for people experiencing homelessness. Hospital liaisons work with agencies to problem-solve and connect individuals to resources, aiming to resolve homeless episodes quickly, whenever possible.
- Provide other direct services, such as offering government benefits such as SNAP and county-funded food distribution programs, free food at community nonprofits, mobile clinics with screenings for homeless persons, hospital social workers and caseworkers providing referrals for people experiencing homelessness, hospital liaisons working with government and non-profit agencies to connect persons to resources
- Fundraising and seeking state and federal funding
- Effective advocacy
- Provide individuals who are not particularly tech-savvy with some assistance completing forms and for government agencies, such as Social Security Administration and Department of Public Social Services.

Specific actions or collaborations for USC Arcadia Hospital to address social and environmental challenges

It was suggested that USC Arcadia Hospital continue to work with both community organizations and the public sector (including government, schools and school districts, and universities).

# Section 11: Priority Community Health Needs

This section includes:

---

- Description of the process and criteria used to identify priority community health needs
- Summary and description of priority community health needs

## Process and Criteria Used

In preparing the community health needs assessment, USC Arcadia Hospital combined quantitative data about service area demographics, availability of health insurance, health access to and utilization of key services, health status, and health behaviors with qualitative data, including opinions of community leaders regarding important health issues in the community. Many of those who provided opinions – including local health providers and representatives from Los Angeles County Departments of Public Health – are active locally in the community and offer valuable perspectives.

The following criteria were used to identify and prioritize significant health needs in the community:

- Healthy People 2030 targets not met
- Foci of Healthy People 2030 – includes health conditions, health behaviors, populations/vulnerable persons, and Social Determinants of Health (SDOH)
- Number of persons affected
- Evidence-based unmet needs
- Identification and/or validation by the data and/or participant responses as an important health issue in the community
- Identified by community organizations as an opportunity to work collaboratively to address health needs

## **Priority Community Health Needs**

The following priority health issues/needs were identified in the community health needs assessment:

- Chronic disease
- Mental health and substance abuse
- Aging and elder care
- Access to health care services
- Social and environmental challenges

Dimensions of each of these priority health needs are highlighted below.

### **Chronic Diseases**

- Diabetes
- High blood pressure
- High cholesterol
- Heart disease
- Congestive heart failure
- Stroke
- Cancer (including colorectal cancer and female breast cancer)
- Obesity and overweight

### **Mental Health and Substance Abuse**

- Youth challenges related to bullying, academics, and issues with substance abuse and suicide
- Asian immigrants to the San Gabriel Valley
- Unhoused individuals
- Limited insurances accepted for mental health care

### **Aging and Elderly Care**

- Dementia
- Alzheimer's disease
- Parkinson's Disease
- Loss of balance and associated trips and falls
- Individuals without caregivers or aides

## **Access to Health Care Services**

- Adequate prenatal care
- Persons of all ages with no usual source of ongoing care
- Persons who experienced delays in getting medical care
- Persons who experienced delays in getting needed prescriptions
- Individuals who do not speak or read English
- Persons who have difficulty navigating the health care system and selecting an insurance product accepted by local physicians and hospitals

## **Social and Environmental Challenges**

- Housing affordability, housing instability, and unhoused persons
- Transportation and long commutes
- Food/nutrition security
- Eaton fires and related water and air pollution

## Section 12: Health Care Facilities and Other Resources

This section includes:

---

- Summary and listing of health care facilities and other resources located in the USC Arcadia Hospital Service Area

## **Health Care Facilities and Other Resources**

In the ZIP codes comprising the hospital service area, there are 17 open hospitals (14 general acute care hospitals and three acute psychiatric hospitals) and 29 licensed free and community clinics. See Section 12B of this section for **Summary of Health Care Facilities, by ZIP Code**.

There are 15 senior/community centers serving various cities and communities in the hospital service area. See Section 12B of this section for **Summary of Senior Centers, by ZIP Code**.

## Summary of Health Care Facilities (Hospitals and Community and Free Clinics), by ZIP Code

Facilities Located in USC Arcadia Hospital Service Area

2025

Facility Name	Address	City	ZIP	Facility License Category	Hospital Detail		Status
					EMS	Beds	
Hospital							
USC Arcadia Hospital	300 West Huntington Drive	Arcadia	91007	General Acute Care Hospital	Basic	348	Open

Notes:

Data updated as of June 2025

EMS = Emergency Medical Services available at hospital facility; designation may be basic or comprehensive

Beds = Total number of beds

A **free clinic** is defined as a clinic operated by a tax-exempt, nonprofit corporation supported in whole or in part by voluntary donations, bequests, gifts, grants, government funds or contributions, that may be in the form of money, goods, or services. Patients are not charged for services rendered or for drugs, medicines, appliances, or apparatuses furnished.

A **community clinic** is defined as a clinic operated by a tax-exempt corporation that is supported and maintained in whole or in part by donations, bequests, gifts, grants, government funds or contributions, that may be in the form of money, goods, or services. Any charges to the patient shall be based on the patient's ability to pay, utilizing a sliding fee scale.

# Appendix D: Community Consultation Participants

---

Participants in the community consultation included representatives from the following public and private organizations.

Note: Asterisk indicates transcript of interview was reviewed; submitted by a member hospital of the Health Consortium of Greater San Gabriel Valley

- Active San Gabriel Valley\*
- Arcadia Community Coordinating Council
- Asian Pacific Health Care Venture (APHCV)\*
- Buddhist Light International Association - Arcadia Chapter
- City of Arcadia - Department of Recreation
- City of Arcadia - Health and Homeless Services
- City of Monrovia - Department of Community Services
- City of Sierra Madre - Department of Recreation
- County of Los Angeles Anti-Racism, Diversity, and Inclusion Initiative (ARDI)\*
- County of Los Angeles Department of Health Care Services - SPA 3\*
- County of Los Angeles Public Health - San Gabriel Valley Health Center\*
- County of Los Angeles Supervisor Kathleen Barger
- El Proyecto del Barrio, Inc.\*
- Foothill Unity Center
- Garfield Health Center - Community Outreach
- Golden Heart Medical
- Happy 50+
- Herald Christian Cancer Association (Note: Designated as a Health Professional Shortage Area by US Department of HHS)
- Los Angeles Homeless Services Authority (LAHSA)\*
- San Gabriel Valley Consortium on Homelessness\*

- Santa Anita Park - Community Service
- USC Arcadia Hospital Emergency Department
- YMCA Santa Anita Family
